**Jumpstart!: Your Way to Healthy Living With the Miracle of Superfoods, New Weight-Loss Discoveries, Antiaging Techniques & More** David Herzog, **The Frankencamera** Eino-Ville Aleksi Talvala,2011 Digital cameras both in traditional form factors and as parts of cell phones have become ubiquitous over the last decade But for the most part they remain black boxes to the end user and cannot be reprogrammed or modified This has become an obstacle to researchers in the new field of computational

photography who want to use the growing computing power of digital cameras to create images no traditional camera could produce This dissertation presents the Frankencamera platform a digital camera system designed for computational photography The Frankencamera is a fully open fully programmable digital camera which can be easily modified to test out new research ideas The Frankencamera architecture allows for per frame control of the capture process and accurate synchronization of all the components that make up the camera Based on this architecture this dissertation details two hardware platforms the F2 a flexible custom built camera and the Nokia N900 a commercial smartphone Both platforms can be easily programmed at a high level using the FCam API written to embody the Frankencamera architecture Finally this dissertation presents several sample applications for the Frankencamera platform Several of these applications could not have been developed for any existing camera platform and the ease and speed at which they were written show that the Frankencamera platform is a compelling tool for computational photography

Risk General Stanley McChrystal, Anna Butrico, 2021-10-05 From the bestselling author of Team of Teams and My Share of the Task an entirely new way to understand risk and master the unknown Retired four star general Stan McChrystal has lived a life associated with the deadly risks of combat From his first day at West Point to his years in Afghanistan to his efforts helping business leaders navigate a global pandemic McChrystal has seen how individuals and organizations fail to mitigate risk Why Because they focus on the probability of something happening instead of the interface by which it can be managed In Risk General McChrystal offers a battle tested system for detecting and responding to risk Instead of defining risk as a force to predict McChrystal and coauthor Anna Butrico show that there are in fact ten dimensions of control we can adjust at any given time Drawing on examples ranging from military history to the business world and offering practical exercises to improve preparedness McChrystal illustrates how these ten factors are always in effect and how by considering them individuals and organizations can exert mastery over every conceivable sort of risk that they might face We may not be able to see the future but with McChrystal's hard won guidance we can improve our resistance and build a strong defense against what we know and what we don't

**MMS** Daniel Ralph,Paul Graham,2004-04-21 MMS has evolved from the huge popularity of the SMS text service for GSM networks It is a departure from the transport mechanism used for SMS which is based on the GSM signalling channels to the use of IP to transport messages within the MMS network To this end MMS has similarities with Internet email and standard IETF protocols As with any new technology it is difficult to accurately predict the position within the next 5 years although based on previous experience with WAP and SMS it would be fair to say that these protocols will increase in usage over the next 5 years and become legacy for a further 5 years following which users will migrate onto the next wave of messaging Significant revenue growth and data usage is expected to be driven by consumer usage of MMS But MMS technology offers more than just a broadening of message content With MMS it is not only possible to send your multimedia messages from one phone to another but also from phone to email and vice versa This feature dramatically increases the possibilities of mobile communication both for private and corporate use Multimedia messaging will reshape the landscape of mobile communication making it more personal more versatile and more expressive than ever before MMS Is the first book to address how MMS and the use of IP to transport messages will affect existing infrastructure and business models Covers the fundamental changes to mail and billing systems Includes future recommendations such as interoperability and evolution Presents an overview of the MMS technology components Drawing on the authors hands on experience in the implementation of MMS technology developing billing and delivering services at BT this innovative book will appeal to engineering managers network operators market analysts business decision makers content providers and operator organizations **The Nexus One Pocket Guide** Jason D. Collaboration Systems Luciano Baresi,Schahram Dustdar,Harald Gall,Maristella Matera,2005-03-01 Over recent years most business processes have changed in various dimensions e.g. exhibitory interconnectivity coordination style autonomy due to market conditions organizational models and usage scenarios of information systems Frequently information is relocated within a geographically distributed system according to rules that are only seldom defined as a well coded business process This creates the need for a software infrastructure that enables ubiquitous mobile and collaboration systems

UMICS The anywhere anytime any means paradigm is becoming the major challenge in conceiving designing and releasing next generation information systems New technologies like wi networks and 3rd generation mobile phones are offering the infrastructure to conceive of information systems as ubiquitous information systems that is systems that are accessible from anywhere at any time and with any device Ubiquity is not yet another buzzword pushed by emerging technologies but is mainly a means to support new business models and encourage new ways of working This new wave of UMICS will exploit the knowledge developed and deployed for conventional information systems but will also need new concepts models methodologies and supporting technologies to fully exploit the potentials of the enabling infrastructure and to be ready for the challenge Moreover people need to move across organizational boundaries and collaborate with others within an organization as well as between organizations The ability to query the company's distributed knowledge base and to cooperate with co workers is still a requirement but mobility brings new access scenarios and higher complexity
