People and Computers XIV — Usability or Else! Sharon McDonald,Yvonne Waern,Gilbert Cockton,2012-12-06 Currently we are at the beginnings of widespread wireless connectivity and ubiquitous computing The Web is merging with a variety of technologies cell phones laptop computers hand held organisers information appliances and GPS and other sensors The capability for access anytime and anywhere is here The increasing frequency of cell phone calls at inappropriate times testifies that people no longer can easily control access Devices can determine where they are located and can make a range of information available to users as well as make users available to others or their devices We have proposed a general technique that promises to assist in mediating access It capitalises on advantages afforded by computation Hollan Stometta 1992 We first described the negotiation technique in the context of problems involved in scheduling meetings and then showed that similar issues which at first may seem unrelated but in fact have much in common arise in other contexts One such activity gaining immediate access is currently of growing importance because of expanding connectivity via wireless technology Cell phones and related technologies make it possible to be constantly available for synchronous interaction At times this can be advantageous but the associated costs and benefits result in a complex tradeoff space for designers as well as users

Risk General Stanley McChrystal,Anna Butrico,2021-10-05 From the bestselling author of Team of Teams and My Share of the Task an entirely new way to understand risk and master the unknown Retired four star general Stan McChrystal has lived a life associated with the

deadly risks of combat From his first day at West Point to his years in Afghanistan to his efforts helping business leaders navigate a global pandemic McChrystal has seen how individuals and organizations fail to mitigate risk Why Because they focus on the probability of something happening instead of the interface by which it can be managed In Risk General McChrystal offers a battle tested system for detecting and responding to risk Instead of defining risk as a force to predict McChrystal and coauthor Anna Butrico show that there are in fact ten dimensions of control we can adjust at any given time Drawing on examples ranging from military history to the business world and offering practical exercises to improve preparedness McChrystal illustrates how these ten factors are always in effect and how by considering them individuals and organizations can exert mastery over every conceivable sort of risk that they might face We may not be able to see the future but with McChrystal s hard won guidance we can improve our resistance and build a strong defense against what we know and what we don t

5G Cyber Risks and Mitigation Sabhyata Soni, 2023-04-13 5G technology is the next step in the evolution of wireless communication It offers faster speeds and more bandwidth than 4G One of the biggest differences between 4G and 5G is that 5G will be used for a wider range of applications This makes it ideal for applications such as autonomous vehicles

smart cities and the Internet of Things IoT This means that there will be more devices connected to 5G networks making them more vulnerable to cyber attacks However 5G also introduces new cyber risks that need to be addressed In addition 5G networks are expected to be much more complex making them harder to secure 5G networks will use new technologies that could make them more vulnerable to attacks These technologies include massive multiple input multiple output MIMO which uses more antennas than traditional cellular networks and millimeter wave mmWave which uses higher frequencies than traditional cellular networks These new technologies could make it easier for attackers to intercept data or disrupt service To address these concerns security measures must be implemented throughout the network Security mechanisms must be included in the design of 5G networks and must be updated as new threats are identified Moreover to address these risks 5G security standards need to be developed and implemented These standards should include measures to protect against Denial of Service DoS attacks malware infections and other threats Fortunately Artificial Intelligence AI can play a key role in mitigating these risks With so many interconnected devices it can be difficult to identify and isolate malicious traffic AI can help by identifying patterns in data that would otherwise be undetectable to humans 6G technology is still in the early developmental stages but security experts are already voicing concerns about the potential challenges that could arise with this next generation of mobile connectivity Experts are already working on a roadmap for 6G deployment and they are confident that these and other challenges can be overcome
