Function of the Nervous System

The nervous system has three specific functions:

1. Receives information from sensory receptors in the body and transmits it to the brain and spinal cord.
2. Processes information and coordinates the body's response.
3. Controls the body's response by sending signals to muscles and glands.

The nervous system is made up of:

- the brain
- the spinal cord
- the peripheral nervous system

The brain is the control center of the nervous system. It receives information from sensory receptors and sends signals to muscles and glands.

The spinal cord is a long, thin tube that runs down the back. It transmits signals between the brain and the rest of the body.

The peripheral nervous system is made up of all the other parts of the nervous system. It includes the nerves that carry signals between the brain, spinal cord and the rest of the body.

The nervous system is responsible for controlling the body's response to information from sensory receptors.

The nervous system is responsible for controlling the body's response to information from sensory receptors.

Topic: _____

Autonomic Nervous System

The Autonomic Nervous System is part of the nervous system that regulates involuntary functions. It controls the internal organs and glands of the body.

It is divided into two main branches:

- Sympathetic Nervous System** (fight or flight)
- Parasympathetic Nervous System** (rest and digest)

The Autonomic Nervous System is controlled by the brain and spinal cord.

It consists of the following parts:

- Brain** (Hypothalamus, Brainstem)
- Spinal Cord** (Cervical, Thoracic, Lumbar, Sacral)
- Autonomic Ganglia** (Sympathetic, Parasympathetic)
- Autonomic Nerves** (Sympathetic, Parasympathetic)

The Autonomic Nervous System is responsible for the following functions:

- Regulating heart rate and blood pressure
- Controlling digestion and metabolism
- Managing the respiratory system
- Controlling the reproductive system

The Autonomic Nervous System is essential for the body's survival and well-being.

Brain and Spinal Cord

The brain and spinal cord are the central parts of the nervous system. They are responsible for processing information and sending out instructions to the rest of the body.

The brain is divided into three main parts:

- Cerebrum** (responsible for thought, memory, and voluntary movement)
- Cerebellum** (responsible for balance, coordination, and fine motor control)
- Brainstem** (responsible for basic life functions like breathing and heart rate)

The spinal cord is a long, thin, tube-like structure that runs from the base of the brain down to the lower back. It is responsible for transmitting signals between the brain and the rest of the body.

This diagram illustrates the autonomic nervous system's connection to the brain and spinal cord. It shows the brainstem, hypothalamus, and the sympathetic and parasympathetic ganglia. The sympathetic nervous system is shown in red, and the parasympathetic nervous system is shown in blue. The diagram also shows the distribution of autonomic nerves to various organs in the body.

Spinal Cord

The spinal cord is a long, thin, tube-like structure that runs from the base of the brain down to the lower back. It is responsible for transmitting signals between the brain and the rest of the body.

The spinal cord is divided into three main parts:

- Cervical** (neck)
- Thoracic** (chest)
- Lumbar** (lower back)

The spinal cord is surrounded by a protective layer called the meninges. It is also surrounded by a network of blood vessels that supply it with oxygen and nutrients.

This diagram illustrates the autonomic nervous system's connection to the spinal cord. It shows the sympathetic and parasympathetic ganglia and the distribution of autonomic nerves to various organs in the body. The diagram also shows the location of the spinal cord within the vertebral column.

Parts of the Brain

Frontal lobe: responsible for reasoning, planning, and decision-making.

Parietal lobe: processes sensory information from the body.

Temporal lobe: involved in hearing and memory.

Occipital lobe: responsible for vision.

Cerebellum: coordinates movement and balance.

Brainstem: controls basic life functions like breathing and heart rate.

Spinal Cord: carries messages between the brain and the rest of the body.

Division of the Nervous System

The nervous system is divided into two main parts: the central nervous system (CNS) and the peripheral nervous system (PNS).

Central Nervous System (CNS): The brain and spinal cord.

Peripheral Nervous System (PNS): All other nerves in the body.

Somatic Nervous System: Controls voluntary movements and sensory information from the body.

Autonomic Nervous System: Controls involuntary functions like heart rate and digestion.

Sympathetic Nervous System: Prepares the body for 'fight or flight'.

Parasympathetic Nervous System: Prepares the body for 'rest and digest'.
