The Carbon Cycle Bray Jacobson, 2020 **The Carbon Age** Eric Roston, 2010-08-09 What do bubbles in a soft drink a bullet proof vest a plastic chair and our DNA have in common Carbon It is and forever has been the ubiquitous architect of life and civilization forming the chemical backbone of every living creature And yet when we hear the word today it is more often than not in a crisis situation carbon dioxide emissions are destroying the ozone layer and warming the planet the volatile Middle East explodes atop its stores of hydrocarbons carbohydrates threaten obesity and diabetics Carbon thus sustains us and threatens us in equal measure Eric Roston illuminates this essential element in all its forms cleverly recreating the intricate carbon cycle on the page by tracing its journey from the Big Bang to Earth and its extraordinary infiltration of this planet and in time influence on humankind and civilization Evoking its ubiquity more than 99% of all 31 million known substances contain

carbon Roston chronicles the ways we have used it often to surprising and sometimes to catastrophic effect having sped up the carbon cycle in the last two centuries we are now attempting to wrestle Earth's geochemical cycle back from the brink Blending the latest science with original reporting Roston makes us aware as never before of the seminal impact carbon has and has had on our lives **The Changing Carbon Cycle** John R. Trabalka, David E. Reichle, 2014-01-15 [The Ocean Carbon Cycle and Climate](#) Mick Follows, Temel Oguz, 2004-08-03 Our desire to understand the global carbon cycle and its link to the climate system represents a huge challenge These overarching questions have driven a great deal of scientific endeavour in recent years What are the basic oceanic mechanisms which control the oceanic carbon reservoirs and the partitioning of carbon between ocean and atmosphere How do these mechanisms depend on the state of the climate system and how does the carbon cycle feed back on climate What is the current rate at which fossil fuel carbon dioxide is absorbed by the oceans and how might this change in the future To begin to answer these questions we must first understand the distribution of carbon in the ocean its partitioning between different ocean reservoirs the solubility and biological pumps of carbon the mechanisms controlling these reservoirs and the relationship of the significant physical and biological processes to the physical environment The recent surveys from the JGOFS and WOCE Joint Global Ocean Flux Study and World Ocean Circulation Experiment programs have given us a first truly global survey of the physical and biogeochemical properties of the ocean These new high quality data provide the opportunity to better quantify the present oceans reservoirs of carbon and the changes due to fossil fuel burning In addition diverse process studies and time series observations have clearly revealed the complexity of interactions between nutrient cycles ecosystems the carbon cycle and the physical environment

The Global Carbon Cycle Christopher B. Field, Michael R. Raupach, 2012-09-26

While a number of gases are implicated in global warming carbon dioxide is the most important contributor and in one sense the entire phenomena can be seen as a human induced perturbation of the carbon cycle The Global Carbon Cycle offers a scientific assessment of the state of current knowledge of the carbon cycle by the world's leading scientists sponsored by SCOPE and the Global Carbon Project and other international partners It gives an introductory overview of the carbon cycle with multidisciplinary contributions covering biological physical and social science aspects Included are 29 chapters covering topics including an assessment of carbon climate human interactions a portfolio of carbon management options spatial and temporal distribution of sources and sinks of carbon dioxide socio economic driving forces of emissions scenarios Throughout contributors emphasize that all parts of the carbon cycle are interrelated and only by developing a framework that considers the full set of feedbacks will we be able to achieve a thorough understanding and develop effective management strategies The Global Carbon Cycle edited by Christopher B Field and Michael R Raupach is part of the Rapid Assessment Publication series produced by the Scientific Committee on Problems of the Environment SCOPE in an effort to quickly disseminate the collective knowledge of the world's leading experts on topics of pressing environmental concern *Carbon* Nancy

Dickmann, 2018-12-15 Organic doesn't only refer to fresh vegetables In science organic describes natural matter or compounds with a carbon base Readers will learn all about the element of carbon from its discovery to the role it plays in living things They'll see real life examples of how humans use carbon in various industries A charming design with illustrations and photographs bring the lesson into detailed focus Accessible text and a concluding quiz help readers engage with this important information making this volume a valuable addition to any library and classroom *Land Carbon Cycle Modeling* Yiqi Luo, Benjamin Smith, 2024-06-14

Carbon moves through the atmosphere through the oceans onto land and into ecosystems This cycling has a large effect on climate changing geographic patterns of rainfall and the frequency of extreme weather and is altered as the use of fossil fuels adds carbon to the cycle The dynamics of this global carbon cycling are largely predicted over broad spatial scales and long periods of time by Earth system models This book addresses the crucial question of how to assess evaluate and estimate the potential impact of the additional carbon to the land carbon cycle The contributors describe a set of new approaches to land carbon cycle modeling for better exploring ecological questions regarding changes in carbon cycling employing data assimilation techniques for model improvement doing real or near time ecological forecasting for decision support and combining newly available machine learning techniques with process based models to improve prediction of the land carbon cycle under climate change This new edition includes seven new chapters machine learning and its applications to carbon cycle research five chapters principles underlying carbon dioxide removal from the atmosphere contemporary active research and management issues one chapter and community infrastructure for ecological forecasting one chapter Key Features Helps readers understand implement and criticize land carbon cycle models

Offers a new theoretical framework to understand transient dynamics of the land carbon cycle Describes a suite of modeling skills matrix approach to represent land carbon nitrogen and phosphorus cycles data assimilation and machine learning to improve parameterization and workflow systems to facilitate ecological forecasting Introduces a new set of techniques such as semi analytic spin up SASU unified diagnostic system with a 1 3 5 scheme traceability analysis and benchmark analysis and PROcess guided machine learning and DATA driven modeling PRODA for model evaluation and improvement Reorganized from the first edition with seven new chapters added Strives to balance theoretical considerations technical details and applications of ecosystem modeling for research assessment and crucial decision making **The Changing Carbon Cycle**

John R. Trabalka, David E. Reichle, 2013-03-09 The United States Government cognizant of its responsibilities to future generations has been sponsoring research for nine years into the causes effects and potential impacts of increased concentrations of carbon dioxide CO₂ in the atmosphere Agencies such as the National Science Foundation National Oceanic and Atmospheric Administration and the U S Department of Energy DOE cooperatively spent about 100 million from FY 1978 through FY 1984 directly on the study of CO₂ The DOE as the 2 lead government agency for coordinating the government's research efforts has been responsible for about 60% of these research efforts William James succinctly defined our purpose when he stated science must be based upon irreducible and stubborn facts Scientific knowledge can and will reduce the present significant uncertainty surrounding our understanding of the causes effects and potential impacts of increasing atmospheric CO₂ We have come far during the past seven years in resolving some underlying doubts and in narrowing the ranges of disagreement Basic concepts have become less murky Yet much more must be accomplished more irreducible and stubborn facts are needed to reduce the uncertainties so that we can improve our knowledge base Uncertainty can never be reduced to zero However with a much improved knowledge base we will be able to learn understand and be in a position to make decisions Nature's Great Carbon Cycle Lorus Johnson Milne, Margery Milne, 1983 Discusses the global cycling of carbon in living things the addition of new carbon to the world's supply and radiocarbon dating of organic matter in fossils The Global Carbon Cycle and the Evolution of Photosynthesis Alexander A. Ivlev, 2019-11-05 The book deals with the problem of the interaction and interconditionality of the various processes occurring in both the Earth's crust and the biosphere It proposes a model of the global carbon cycle explaining the nature and mechanism of these interactions showing that the key element of this interaction is the photosynthesis controlled by periodic carbon dioxide injections caused by collision zones of lithospheric plates Changes in the environment due to the evolution of photosynthesis cause alterations in the carbon cycle and lead to a stationary state when new features of the cycle are manifested The main instruments of the analysis here are the isotopic technique and physico chemical modeling conducted on the basis of the principle of actualism The model provides explanations of periodic mass extinctions of organisms the explosions of life the uneven distribution of organic matter in the sedimentary strata stratigraphic oil

The Global Carbon Cycle Martin Heimann, 2013-06-29 This book is the outcome of a NAill Advanced Study Institute on the contemporary global carbon cycle held in n Ciocco Italy September 8 20 1991 The motivation for this ASI originated from recent controversial findings regarding the relative roles of the ocean and the land biota in the current global balance of atmospheric carbon dioxide Consequently the purpose of this institute was to review among leading experts in the field the multitude of known constraints on the present day global carbon cycle as identified by the fields of meteorology physical and biological oceanography geology and terrestrial biosphere sciences At the same time the form of an Advanced Study Institute was chosen thus providing the opportunity to convey the information in tutorial form across disciplines and to young researchers entering the field The first three sections of this book contain the lectures held in II Ciocco The first section reviews the atmospheric large scale global constraints on the present day carbon cycle including the emissions of carbon dioxide from fossil fuel use and it provides a brief look into the past The second section discusses the role of the terrestrial biosphere and the third the role of the ocean in the contemporary global carbon cycle
