In this study, we investigated the effects of P and S on the growth and yield of wheat (*Triticum aestivum* L.) under different soil conditions. The results showed that the application of P and S significantly increased the growth and yield of wheat, especially in the low P and S soils. The optimal application rates of P and S were determined to be 100 kg P₂O₅/ha and 50 kg S/ha, respectively. These results provide valuable information for the management of P and S in wheat production.
