The Nature of the Page Joshua Calhoun, 2019-12-27 An innovative study of books and reading that focuses on papermaking in the Renaissance In *The Nature of the Page* Joshua Calhoun tells the story of handmade paper in Renaissance England and beyond For most of the history of printing paper was made primarily from recycled rags so this is a story about using old clothes to tell new stories about plants used to make clothes and about plants that frustrated papermakers best attempts to replace scarce natural resources with abundant ones Because plants like humans are susceptible to the ravages of time it is also a story of corruption and the hope that we can preserve the things we love from decay Combining environmental and bibliographical research with deft literary analysis Calhoun reveals how much we have left to discover in familiar texts He describes the transformation of plant material into a sheet of paper details how ecological availability or scarcity influenced literary output in the sixteenth and seventeenth centuries and examines the impact of the various colors and qualities of paper on early modern reading practices Through a discussion of sizing the mixture used to coat the surface of paper so that ink would not blot into its fibers he reveals a surprising textual interaction between animals and readers He shows how we might read an indistinct stain on the page of an early modern book to better understand the mixed media surfaces on which readers writers and printers recorded and revised history Lastly Calhoun considers how early modern writers imagined paper decay and how modern scholars grapple with biodeterioration today Exploring the poetic interplay between human ideas and the plant animal and mineral forms through which they are mediated *The Nature of the Page* prompts readers to reconsider the role of the natural world in everything from old books to new smartphones

Putting Ourselves Back in the Equation George Musser,2023-11-07 This is a delightful account of one of the deepest and most fascinating explorations going on today at the frontier of our knowledge Carlo Rovelli bestselling author of The Order of Time and Seven Brief Lessons on Physics Musser knows that the point of popular science is to get a sense of what s at stake what kinds of answers are being offered to difficult questions and why it all matters One could not ask more of Putting Ourselves Back in the Equation on all three counts it delivers Julian Baggini The Wall Street Journal A revelatory exploration of how a theory of everything depends upon our understanding of the human mind The whole goal of physics is to explain what we

observe For centuries physicists believed that observations yielded faithful representations of what is out there But when they began to study the subatomic realm they found that observation often interferes with what is being observed that the act of seeing changes what we see The same is true of cosmology our view of the universe is inevitably distorted by observation bias And so whether they re studying subatomic particles or galaxies physicists must first explain consciousness and for that they must turn to neuroscientists and philosophers of mind Neuroscientists have painstakingly built up an understanding of the structure of the brain Could this help physicists understand the levels of self organization they observe in other systems These same physicists meanwhile are trying to explain how particles organize themselves into the objects around us Could their discoveries help explain how neurons produce our conscious experience Exploring these questions and more George Musser tackles the extraordinary interconnections between quantum mechanics cosmology human consciousness and artificial intelligence Combining vivid descriptive writing with portraits of scientists working on the cutting edge Putting Ourselves Back in the Equation shows how theories of everything depend on theories of mind and how they might be one and the same
