Limits of the Numerical Christopher Newfield, Anna Alexandrova, Stephen John, 2022-06-24 This collection examines the uses of quantification in climate science higher education and health Numbers may seem fragile they are after all frequent objects of obfuscation or outright denial but they have also never been more influential in our society figuring into everything from college rankings to vaccine efficacy rates This timely collection by a diverse group of humanists and social scientists challenges undue reverence or skepticism toward quantification and shows how it can be a force for good despite its many abuses Limits of the Numerical focuses on quantification in several contexts the role of numerical estimates and targets in explaining and planning for climate change the quantification of outcomes in teaching and research and numbers representing health the effectiveness of medical interventions and well being more broadly The authors complicate our understanding of these numbers uncovering for example epistemic problems with some core numbers in climate science But their theme is less the problems revealed by case studies than the methodological issues common to them all This volume shows the many ways that qualitative and quantitative approaches can productively interact how the limits of the numerical can be overcome through equitable partnerships with historical institutional and philosophical analysis

*The Matter of Consciousness* Torin Alter,2023-01-31 Torin Alter presents a compelling defence of the knowledge

argument against physicalism pioneered by Frank Jackson According to physicalism consciousness is a physical phenomenon The knowledge argument stars Mary who learns all objective physical information through black and white media and yet acquires new information when she first sees colors for herself information about what it is like to see in color Based partly on that case Jackson concludes that not all information is physical Alter argues that the knowledge argument succeeds in refuting all standard versions of physicalism versions on which consciousness is grounded by what objective science reveals Alter also argues that given further plausible assumptions the knowledge argument leads to Russellian monism according to which there are intrinsic properties that both constitute consciousness and underlie properties described by physics such as mass and charge Alter explains how the knowledge argument establishes those two conclusions and defend it against numerous objections
