

# How to connect a subwoofer to a receiver with no subwoofer output

## Example 1

**Amp/receiver + powered subwoofer with RCA low level input**

A line level converter changes speaker level outputs to an RCA (low level) signal for use with any RCA input jack input(s).

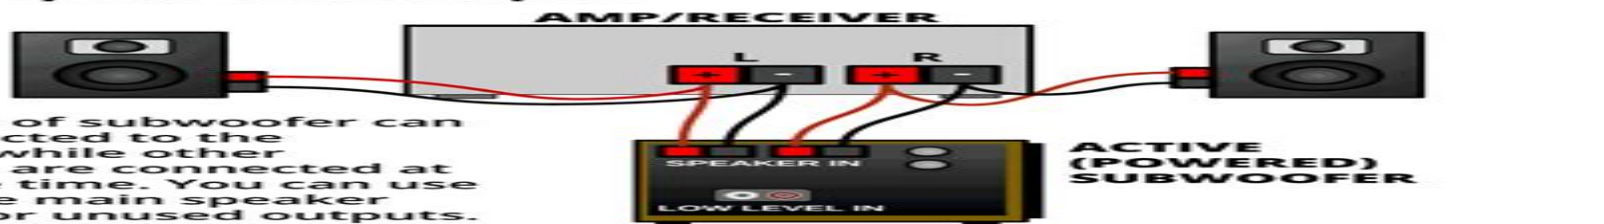

You can use them with or without speakers connected at the same time.

## Example 2

**Amp/receiver + powered subwoofer with speaker level inputs**

This type of subwoofer can be connected to the receiver while other speakers are connected at the same time. You can use either the main speaker outputs or unused outputs.

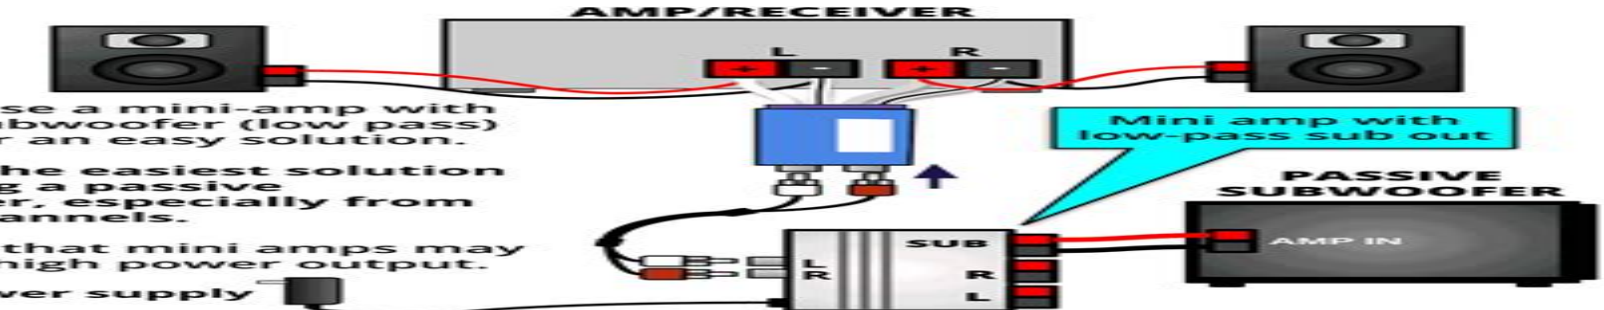

## Example 3

**Amp/receiver + passive (non-powered) subwoofer + mini amplifier**

You can use a mini-amp with built-in subwoofer (low pass) output for an easy solution.

These is the easiest solution for adding a passive subwoofer, especially from stereo channels.

Be aware that mini amps may not have high power output.

## Example 4

**Amp/receiver + passive (non-powered) subwoofer**

Passive (non-powered) subwoofers can be used with a receiver without subwoofer speaker outputs using a low-pass passive crossover.

This requires unused speaker outputs.

*This is not the best option because a single voice coil subwoofer cannot be connected to two speaker outputs without impedance problems for the receiver.*
