

## 3-year-old Child Observation Report Sample: Physical and Cognitive Development

### Table of contents

## Introduction

Physical and cognitive development of a 3-year-old male named Christian has been evaluated by the completion of several exercises, which were video recorded. A therapist directed these activities, which also included his six-year-old sister, Clara. Christian spends two days a week at kindergarten and the rest at home with his parents and sister, when she is not at school. He is more interested in active play such as riding a balance bike (no pedals) and skateboard of which he has reasonable command, rather than performing sedentary activities like drawing. This assignment focuses on gross motor, fine motor, language and communication, cognitive and psychosocial area milestones and whether or not Christian has achieved them. Christian is observed in a classroom where multiple activities are offered such as drawing, playing with toys and various physical events like hopping and catching a ball. Information is also sourced from his parents. His development will be compared to what is expected of a three-year-old (Queensland Health Child Development Milestones) to establish whether the appropriate standards have been reached. Theories of lifespan development including Piaget's and Erikson's will be linked to Christian's performance.

## In-Depth Analysis (Gross Motor)

Movement is a sequence of patterns of both gross and fine motor skills along with fundamental movement skills. Christian undergoes various activities which involve controlling larger muscle groups; for example, walking, throwing, or jumping. These abilities aid development and coordination of the arms, legs, hands, feet, head, neck and torso. Important characteristics of gross skills include postural control (both static stability and dynamic control), body awareness and muscularity. These are essential skills for life, and supporting the growth of a child's gross motor development enhances their short and long-term physical outcomes.

Including the Journal of Proceedings American Institute of Instruction, 1879 List of members included in each volume beginning with 1891      *18 Unconventional Essays on the Nature of Mathematics* Reuben Hersh, 2006-01-16 This book comes from the Internet Browsing the Web. I stumbled on philosophers, cognitive scientists, sociologists, computer scientists, even mathematicians saying original provocative things about mathematics. And many of these people had probably never heard of each other. So I have collected them here. This way they can read each other's work. I also bring back a few provocative oldies that deserve publicity. The authors are philosophers, mathematicians, a cognitive scientist, an anthropologist, a computer scientist, and a couple of sociologists. Among the mathematicians are two Fields Prize winners and two Steele Prize winners. None are historians. I regret to say but there are two historically oriented articles. These essays don't share any common program or ideology. The standard for admission was: Nothing boring. Nothing trite. Nothing trivial. Every essay is challenging, thought provoking, and original. Back in the 1970s when I started writing about mathematics instead of just doing mathematics, I had to complain about the literature. Philosophy of science was already well into its modern revival, largely stimulated by the book of Thomas Kuhn. But philosophy of mathematics still seemed to be mostly foundationist ping pong in the ancient style of Rudolf Carnap or Willard Van Ormon Quine. The great exception was *Proofs and Refutations* by Imre Lakatos. But that exciting book was still virtually unknown and unread by either mathematicians or philosophers. I wrote an article entitled *Introducing Imre Lakatos in the Mathematical Intelligencer* in 1978.      CliffsNotes CSET: Multiple Subjects with CD-ROM, 3rd Edition Stephen Fisher, Jerry Bobrow, 2012-04-03 A new edition of one of the bestselling CSET products on the market.
