

Physical Geology Lab # 2: Plate Tectonics

Paleomagnetic Stripes and Seafloor Spreading

Analyze the seafloor part of the map below just off the Pacific Coast along California, Oregon, Washington, and southwest Canada. The shaded/colored bands are seafloor magnetic anomalies. Shaded/colored bands are rocks with a positive magnetic anomaly so they have normal polarity like the present day. The white bands are rocks with a negative or reversed polarity. The different shades or colors indicate the ages of the rocks in millions of years as shown in the Polar Reversal Time Scale chart provided.
