existing ones. A Resource for Evaluating Disease Status Outcomes research is playing an increasingly important role in clinical management and neurorehabilitation and these also depend largely on measurement of disease status and change. In this era of managed care neurologists must produce outcomes data demonstrating the effectiveness of neurologic care if the specialty is to survive and certainly if it is to thrive. Even effective therapies are likely to fall by the wayside if studies to prove their effectiveness are not done.

Each entry notes the purpose for which the scale was developed and its current uses if they differ from those for which it was developed, a detailed description of the scale, information about validation such as: Does the scale have face validity? i.e. does it appear to measure what it purports to measure? how and by whom the scale is administered, the time needed to administer and score the scale, the scale itself or when the scale is proprietary or too long for inclusion, a description and key references, special considerations including unusual measures needed to obtain a valid score or problems in administering the test in specific patients, advantages or what makes the scale good or useful, Disadvantages or what makes the scale difficult to use or impairs its reliability, key references including the original publication of the scale and its validation. Downloadable PDFs of the scales contained in the Handbook of Neurologic Rating Scales are included with the purchase of this book. The password to download the files can be found in the book itself.
