Education Convention KONASPI X Konaspi is a routine activity of the PPTKN which is held once every four years. The fourth industrial revolution 4.0 is marked by technological advances and supported by artificial intelligence that creates opportunities and challenges for the education system. University and vocational school graduates are facing a world transformed by technology which in turn is transforming the workplace from task based to human centered characteristics. Certain skills such as critical thinking, emotional intelligence, problem solving, cognitive flexibility, and knowledge production are required. To answer this demand, the education system must put revolutionary innovation on its agenda. Scholars, researchers, and practitioners are invited to share ideas, research results, and best practices about education science and technology now and in the future at an international conference held by Universitas Negeri Manado as part of the Indonesian National Education Convention KONASPI. As part of KONASPI X activities, Universitas Negeri Manado is holding the 2022 International Conference on Education, Social Science, and Humanities (ICESSSHum). The topics in this international conference are Education, Law, Politics, and Social Sciences, Economics, Public Administration, and Humanities. Through these themes, it is expected to involve many professionals who have indirect roles in related fields. To enrich this event, the committee invites all national and international participants, including academics, researchers, professionals, and other relevant stakeholders, to send research papers or review papers to be presented at the conference.

Library of Congress, Copyright Office, 1975      *Current Index to Journals in Education*, 1989      **Make It New** Barry M. Katz, 2015-09-04

The role of design in the formation of the Silicon Valley ecosystem of innovation. California's Silicon Valley is home to the greatest concentration of designers in the world: corporate design offices at flagship technology companies and volunteers at nonprofit NGOs, global design consultancies, and boutique studios, research laboratories, and academic design programs. Together, they form the interconnected network that is Silicon Valley. Apple products are famously designed in California, but as Barry Katz shows in this first ever extensively illustrated history, the role of design in Silicon Valley began decades before Steve Jobs and Steve Wozniak dreamed up Apple in a garage. Offering a thoroughly original view of the subject, Katz tells how design helped transform Silicon Valley into the most powerful engine of innovation in the world. From Hewlett Packard and Ampex in the 1950s to Google and Facebook today, design has provided the bridge between research and development, art and engineering, technical performance and human behavior. Katz traces the origins of all of the leading consultancies, including IDEO, frog, and Lunar, and shows the process by which some of the world's most influential companies came to place design at the center of their business strategies. At the same time, universities, foundations, and even governments have learned to apply design thinking to their missions. Drawing on unprecedented access to a vast array of primary sources and interviews with nearly every influential design leader, including Douglas Engelbart, Steve Jobs, and Don Norman, Katz reveals design to be the missing link in Silicon Valley's ecosystem of innovation.
