Master's Degree in Science and Technology Intelligence National Research Council, Division on Engineering and Physical Sciences, Committee for the Review of the Master's Degree Program for Science and Technology Intelligence Professionals, 2011-10-14 The National Research Council NRC was asked by the National Defense Intelligence College NDIC to convene a committee to review the curriculum and syllabi for their proposed master of science degree in science and technology intelligence The NRC was asked to review the material provided by the NDIC and offer advice and recommendations regarding the program s structure and goals of the Master of Science and Technology Intelligence MS TI program The Committee for the Review of the Master s Degree Program for Science and Technology Professionals convened in May 2011 received extensive briefings and material from the NDIC faculty and administrators and commenced a detailed review of the material This letter report contains the findings and recommendations of the committee Review of the National

Defense Intelligence College's Master's Degree in Science and Technology Intelligence centers on two general areas. First, the committee found that the biological sciences and systems engineering were underrepresented in the existing program structure. Secondly, the committee recommends that the NDIC faculty restructure the program and course learning objectives to focus more specifically on science and technology with particular emphasis on the empirical measurement of student achievement. Given the dynamic and ever-changing nature of science and technology, the syllabi should continue to evolve as change occurs.

Developing Models in Science Education J.K. Gilbert, C. Boulter, 2012-12-06 Models and modelling play a central role in the nature of science in its conduct in the accreditation and dissemination of its outcomes as well as forming a bridge to technology. They therefore have an important place in both the formal and informal science education provision made for people of all ages. This book is a product of five years collaborative work by eighteen researchers from four countries. It addresses four key issues: the roles of models in science and their implications for science education; the place of models in curricula for major science subjects; the ways that models can be presented to and learned about; and can be produced by individuals; the implications of all these for research and for science teacher education. The work draws on insights from the history and philosophy of science, cognitive psychology, sociology, linguistics, and classroom research to establish what may be done and what is done. The book will be of interest to researchers in science education and to those taking courses of advanced study throughout the world.
