*How We Teach Science* John L. Rudolph, 2019-06-01 A former Wisconsin high school science teacher makes the case that how and why we teach science matters especially now that its legitimacy is under attack Why teach science The answer to that question will determine how it is taught Yet despite the enduring belief in this country that science should be taught there has been no enduring consensus about how or why This is especially true when it comes to teaching scientific process Nearly all of the basic knowledge we have about the world is rock solid The science we teach in high schools in particular laws of motion the structure of the atom cell division DNA replication the universal speed limit of light is accepted as the way nature works Everyone also agrees that students and the public more generally should understand the methods used to gain this knowledge But what exactly is the scientific method Ever since the late 1800s scientists and science educators have grappled with that question Through the years they've advanced an assortment of strategies ranging from the laboratory method to the five step method to science as inquiry to no method at all *How We Teach Science* reveals that each strategy was influenced by the intellectual cultural and political circumstances of the time In some eras learning about experimentation and scientific inquiry was seen to contribute to an individual's intellectual and moral improvement while in others it was viewed as a way to minimize public interference in institutional science John Rudolph shows that how we think about and teach science will either sustain or thwart future innovation and ultimately determine how science is perceived and received by the public

**Sport Development in the United States** Peter Smolianov, Dwight Zakus, Joseph Gallo, 2014-09-15 The development of both elite high performance sport and mass participation grassroots level sport are central concerns for governments and sports governing bodies This important new study is the first to closely examine the challenges and opportunities for sports development in the United States a global sporting giant with a unique market driven sporting landscape Presenting an innovative model of integrated sports development the book explores the inter relationship between elite and mass sport across history drawing on comparative international examples from Australia to the former USSR and Eastern bloc countries At the heart of the book is an in depth empirical study of three traditional and emerging

**The Case against Education** Bryan Caplan, 2018-01-30 Why we need to stop wasting public funds on education Despite being immensely popular and immensely lucrative education is grossly overrated In this explosive book Bryan Caplan argues that the primary function of education is not to enhance students skill but to certify their intelligence work ethic and conformity in other words to signal the qualities of a good employee Learn why students hunt for easy As and casually forget most of what they learn after the final exam why decades of growing access to education have not resulted in better jobs for the average worker but instead in runaway credential inflation how employers reward workers for costly schooling they rarely if ever use and why cutting education spending is the best remedy Caplan draws on the latest social science to show how the labor market values grades over knowledge and why the more education your rivals have the more you need to impress employers He explains why graduation is our society's top conformity signal and why even the most useless degrees can certify employability He advocates two major policy responses The first is educational austerity Government needs to sharply cut education funding to curb this wasteful rat race The second is more vocational education because practical skills are more socially valuable than teaching students how to outshine their peers Romantic notions about education being good for the soul must yield to careful research and common sense The Case against Education points the way
