 Bridgman Perkins,2017-08-16 Appraising cancer as a major medical market in the 2010s Wall Street investors placed their
 bets on single technology treatment facilities costing 100 300 million each Critics inside medicine called the widely
 publicized proton center boom crazy medicine and unsustainable public policy There was no valid evidence they claimed that
 proton beams were more effective than less costly alternatives But developers expected insurance to cover their centers
 staggeringly high costs and debts Was speculation like this new to health care Cancer Radiation Therapy and the Market
 shows how the radiation therapy specialty in the United States later called radiation oncology coevolved with its device
 industry throughout the twentieth century Academic engineers and physicians acquired financing to develop increasingly
 powerful radiation devices initiated companies to manufacture the devices competitively and designed hospital and
 freestanding procedure units to utilize them In the process they incorporated market strategies into medical organization
 and practice Although palliative benefits and striking tumor reductions fueled hopes of curing cancer scientific research all
 too often found serious patient harm and disappointing beneficial impact on cancer survival This thoroughly documented and
 provocative inquiry concludes that public health policy needs to re evaluate market driven high tech medicine and build
