Spatial Data and Intelligence Huayi Wu, Yu Liu, Jianzhong Li, Xiaofeng Meng, Qingfeng Guan, Xuan Song, Guoqiong Liao, Guoliang Li, 2023-01-17. This book constitutes the refereed proceedings of the Third International Conference SpatialDI 2022 Wuhan China August 5-7, 2022. Revised Selected Papers. The 19 full papers and 1 short paper included in this book were carefully reviewed and selected from 77 submissions. They were organized in topical sections as follows: Traffic Management, Data science, City Analysis. *Commercial Aircraft Propulsion and Energy Systems Research* National Academies of Sciences, Engineering, and Medicine, Division on Engineering and Physical Sciences, Aeronautics and Space Engineering Board, Committee on Propulsion and Energy Systems to Reduce Commercial Aviation Carbon Emissions, 2016-08-09. The primary human activities that release carbon dioxide (CO₂) into the atmosphere are the combustion of fossil fuels: coal, natural gas and oil to generate electricity; the provision of energy for transportation; and as a consequence of some industrial processes. Although aviation CO₂ emissions only make up approximately 2.0 to 2.5 percent of total global annual CO₂ emissions, research to reduce CO₂ emissions is urgent because 1) such reductions may be legislated even as commercial air travel grows; 2) because it takes new technology a long time to propagate into and through the aviation fleet; and 3) because of the ongoing impact of global CO₂ emissions. *Commercial Aircraft Propulsion and Energy Systems Research* develops a national research agenda for reducing CO₂ emissions from commercial aviation. This report focuses on propulsion and energy technologies for reducing carbon emissions from large commercial aircraft: single aisle and twin aisle aircraft that carry 100

or more passengers because such aircraft account for more than 90 percent of global emissions from commercial aircraft. Moreover, while smaller aircraft also emit CO₂, they make only a minor contribution to global emissions, and many technologies that reduce CO₂ emissions for large aircraft also apply to smaller aircraft. As commercial aviation continues to grow in terms of revenue passenger miles and cargo ton miles, CO₂ emissions are expected to increase. To reduce the contribution of aviation to climate change, it is essential to improve the effectiveness of ongoing efforts to reduce emissions and initiate research into new approaches.

The Aristotelian Mirabilia and Early Peripatetic Natural Science Arnaud Zucker, Robert Mayhew, Oliver Hellmann, 2024-02-13

This is the first volume devoted to the sections of the Aristotelian *Mirabilia* on natural science, filling a significant gap in the history of the Aristotelian study of nature and especially of animals. The chapters in this volume explore the *Mirabilia* or *De mirabilibus auscultationibus* *On Marvelous Things Heard* and its engagement with the natural sciences. The first two chapters deliver an introduction to this work: one a discussion of the history of the text and the other a discussion of Aristotelian epistemology and methodology and the role of the *Mirabilia* in that context. This is followed by eight chapters that together are effectively a commentary on those sections of the *Mirabilia* with close connections to Aristotle's *Historia animalium* and to a number of Theophrastus' scientific treatises. Finally, the volume ends with two chapters on thematic topics connected to natural science running throughout the work, namely color and disease. *The Aristotelian Mirabilia and Early Peripatetic Natural Science* should prove invaluable to scholars and students interested in the ancient Greek study of nature, ancient philosophy, and Aristotelian science in particular.
