*Reducing greenhouse gas emissions from deforestation* Great Britain: Parliament: House of Commons: Environmental Audit Committee,2009-06-29 An area of tropical forest the size of England continues to be lost each year This gives rise to around 17 per cent of global greenhouse gas emissions greater than global emissions from transport Addressing deforestation is as essential as decarbonising electricity or transport if the world is to avoid dangerous climate change A failure to act on deforestation could double the cost of avoiding dangerous climate change to 2030 Deforestation is caused by a range of factors many of which are exacerbated by a growing global population and increasing consumption Halting deforestation requires a support for rainforest nations to help them manage their development so that it does not allow continued deforestation b management of the demand for commodities whose production encourages deforestation and c the introduction of a mechanism to pay developing countries for maintaining and in due course recreating their forests The UK needs to act in all three areas if its policies on deforestation are to be successful Ignoring any one undermines the effectiveness and durability of action in the other areas As part of this work the Government must remove subsidies that contribute to deforestation such as biofuels policy develop sustainability standards for agricultural commodities implement and enforce government timber procurement and seek an EU wide ban on illegal timber imports combined with robust sanctions Illegal timber imports are still a fact of life within the UK timber trade The economic environmental and development case for immediate action on deforestation is clear But success is possible only if the international community works together effectively

*Practical Astrodynamics* Alessandro de Iaco Veris,2017-11-28 This modern textbook guides the reader through the theory and practice of the motion and attitude control of space vehicles It first presents the fundamental principles of spaceflight mechanics and then addresses more complex concepts and applications of perturbation theory orbit determination and refinement space propulsion orbital maneuvers interplanetary trajectories gyroscope dynamics attitude control and rocket performance Many algorithms used in the modern practice of trajectory computation are also provided The numerical treatment of the equations of motion the related methods and the tables needed to use them receive particular emphasis A large collection of bibliographical references including books articles and items from the gray literature is provided at the end of each chapter and attention is

drawn to many internet resources available to the reader The book will be of particular value to undergraduate and graduate students in aerospace engineering **Hearing to Review the Future of Our Nation's Forests** United States.
