Raymond Chang Chemistry 9th Edition:

Human Chemistry (Volume Two) Libb Thims, 2007-09-01 Volume two begins with Goethe's theories of affinities i.e. the chemical reaction view of human life in 1809. This is followed by the history of how the thermodynamic 1876 and quantum 1905 revolutions modernized chemistry such that affinity, the force of reaction, is now viewed as a function of thermodynamic free energy, reaction spontaneity, and quantum valency bond stabilities. The composition, energetic state dynamics, and evolution of the human chemical bond A-B is the centerpiece of this process. The human bond is what gives yields and takes, absorbs energy in life. The coupling of this bond energy driven by periodic inputs of solar photons thus triggering activation energies and entropies connected to the dynamical work of life is what quantifies the human reaction process. This is followed by topics including mental crystallization, template theory, LGBT chemistry, chemical potential, Le Chatelier's principle, Muller dispersion forces, and human thermodynamics. Love is Green: Compassion as responsibility in the ecological emergency Lucy Weir, 2020-01-31 This book links three themes: non-dualistic agency, the good of systems, and compassionate attunement, and relates them to the ecological emergency. The author begins by examining how we currently understand our ability to choose what we do, our agency, and concludes that this is dualistic: we think of an action to do and then we physically act. Yet an understanding that we are enmeshed in context means our capacity to act freely dissolves in the mesh. We evolved capacities for consciousness and awareness, capacities that allow us to realise that we are here now but that do not inevitably imply choice. Our capacity for realisation gives us the ability to elicit an emotional response. When we understand our enmeshment, we can attune to a deep compassion for ourselves and indeed for all systems unfolding through time. Compassionate attunement allows a different set of options for action to become available to us. This then shifts how we respond to ourselves, our human relationships, and to the ecological emergency we are currently embroiled in. This work is inspired by the great Kamakura Zen Master Eihei Dogen. The book's contribution is to extend and link the notion of practice/realisation with the literature on evolutionary biology and entropy maximisation, which allows us to speak of the good of systems. Systems unfold as good for us when biodiversity maximisation occurs. By considering the ecological emergency in light of compassionate attunement, we open ourselves to a new array of possibilities for action. Some of these, the author outlines in the conclusion, relating them to existing literature on compassionate achievement and compassionate communication, to show how our practice shifts our relationship to ourselves, to one another, and to the ecological emergency, thus changing the course of human history.
