Justification Bernard Gert Stone Professor of Intellectual and Moral Philosophy, 1998-07-31 Bernard Gert's classic work *Morality* in which he argues his distinctive and comprehensive moral theory is now in its sixth edition. Gert argues that morality is an informal system that does not provide answers to every moral question but does always limit the range of morally acceptable options and so explains why some moral questions cannot be resolved. Gert describes the two-step procedure that is used in moral decisions and judgments and he shows that moral rules cannot be understood independently of the system in which they are embedded. Although his moral theory is sophisticated, it is presented with a clarity that will appeal to undergraduate and graduate students alike as well as anyone with a general interest in applied ethics. In this new edition, Gert perfects the consistency of his views by presenting his argument in greater detail; he also revises the text in light of a critical book and two symposia dedicated to his theory that have surfaced since the book's last publication. This is the definitive edition to the work that has received so much attention and acclaim.

Principles of Biomedical Ethics Tom L. Beauchamp, James F. Childress, 2001 For many years this has been a leading textbook of bioethics. It established the framework of principles within the field. This is a very thorough revision with a new chapter on methods and moral justification.

International Criminal Procedure Göran Sluiter, Sergey Vasiliev, 2013-03-21 The ambitious aim of the work is to create a guiding framework for international criminal procedural law and practices in the future. As explained by the working groups, the overarching objective of the project is to assist the challenge of delivering fair but also effective trials.

Children's Emotions and Moods Michael Lewis, 2012-12-06 No one would deny the proposition that in order to understand human behavior and development one must understand feelings. The interest in emotions is enduring. Yet within the discipline of psychology, the study of feelings and emotions has been somewhat less than respectable—a stepchild to the fields of cognitive science and psycholinguistics. Perusal of the language acquisition literature reveals a greater concern among psychologists for the acquisition of prepositions than for terms that convey feelings. Without question, issues related to emotion, its development, and its measurement have been neglected in the research literature until quite recently. From a developmental perspective, Piaget and his followers have articulated a complex theory of transition and change in intellectual behavior. Nearly a century ago, Freud proposed an elaborate theory of personality development in which some aspects of emotional growth were considered. We await the construction of a comprehensive theory of emotional development. Recognizing such a need, we set out over a decade ago to solve what seemed to be a relatively simple problem. By observing young children, could one successfully classify children in terms of individual differences on emotional dimensions such as happiness, fear, and anger? The task appeared easy. One could send graduate students into a preschool and ask them to observe children for several days after which they would rank the children in terms of differences on various emotional dimensions.
