Levy, Sandra J. Peart, 2016-12-24 The orthodox view of economic policy holds that public deliberation sets the goals or ends and then experts select the means to implement these goals This assumes that experts are no more than trustworthy servants of the public interest David M Levy and Sandra J Peart examine the historical record to consider cases in which experts were trusted with disastrous results such as eugenics the regulatory use of security ratings and central economic planning This history suggests that experts have not only the public interest but also their own interests to consider The authors then recover and extend an alternative view of economic policy that subjects experts proposals to further discussion resulting in transparency and ensuring that the public obtains the best insights of experts in economics while avoiding pitfalls such as expert bias

**Brain-Focused Foundation for Economic Science** Richard B. McKenzie, 2018-06-06 This book argues that Lionel Robbins s construction of the economics field s organizing cornerstone scarcity and all that has been derived from it from economists in Robbins s time to today no longer can generate general consent among economists Since Robbins Essay economists have learned more than Robbins and his cohorts could have imagined about human decision making and about the human brain that is the lynchpin of human decision making This book argues however that behavioral economists and neuroeconomists in pointing to numerous ways people fall short of perfectly rational decisions anomalies biases and downright errors have saved

conventional economics from such self contradictions in what could be viewed as a wayward approach This book posits that the human brain is the ultimate scarce resource and that a focus on the brain can bring a new foundation for economics and can save the discipline from hostile criticisms from a variety of non economists many psychologists **Catalog of**

*development: Why this could be a role model for other developing nations as well* Sujay Rao Mandavilli, 2024-05-05 In a paper published by us a couple of years ago on Anthropological Economics the year 2020 to be precise we had mooted the idea of trickle up economics as contrasted with the rather more popular and mundane trickle down economics We had argued that the latter would be somewhat dubious iffy inconsistent and non replicable in a wide variety of situations particularly in the case of developing nations We had argued that trickle up economics would actually boost wide ranging economic growth and add to the Gross domestic product in a big way While we never were and still are not big fans of socialism we have always argued and will continue to argue for balanced diversified and equitable economic development models There is a world of difference between the two We had also argued that the economic models pursued by advanced industrial nations will not by and large work in developing nations Thus American style economic conservatism is meaningless in Indian political and economic contexts There are fundamental differences in ground realities between these two different sets of nations It would make eminent sense for the readers of this book to read the aforesaid paper as well as we will not be able to reproduce the contents in this paper in its entirety here many of the proposals advocated and espoused in this paper can also be implemented by developing economies though rather much more slowly We focus only on the meat here Introducing Anthropological Economics Sujay Rao Mandavilli, This paper attempts to merge the concepts and theoretical frameworks of the disciplines of Anthropology and Economics and attempts to create a new sub field in Economics called Anthropological Economics which is mired in Anthropological concepts and principles and seeks to maximize not only human welfare and happiness but also wealth maximization across cultures while considering both the psychic unity of man universal human needs and culture specific factors Thus Anthropological Economics is expected to be inter related to other disciplines of Economics but remain complementary to them i e it is not expected that it will intrude into other sub fields of economics replace them or override their principles in any way It will therefore draw upon other aspects of economic theory and enrich them suitably It is therefore expected that all aspects of Economic theory will be taken into consideration for policy formulation and decision making including those of Anthropological economics and independent context specific judgment will always be applied The new proposed field of Anthropological Economics proposes to take the idea of Human Welfare to its logical conclusion by extending the work already carried out in various sub disciplines of economics and integrating it more tightly with various concepts in Anthropology Many new tools and techniques are therefore proposed as a part of this

paper and we believe these will suitably enrich the field of Economics as well. While many attempts have been made in the past to integrate the fields of Anthropology and Economics, we hope this endeavour will take this exercise to a much higher level by creating a new generation of Anthro-economists. We also hope it will eventually help move mainstream economics away from Neo-classical approaches to Anthropological and human-centric approaches.

Policy Solutions for Economic Growth in a Developing Country Nassir Ul Haq Wani, 2024-06-17 Perspectives on Afghanistan's Trade and Development offers a rich and varied policy analysis for those who wish to design a policy to bolster exports from Afghanistan and for academicians, researchers, and students who wish to gain greater insight into this developing economy.

**Reconstruction of Macroeconomics: Methods of Statistical Physics, and Keynes' Principle of Effective Demand** Hiroshi Yoshikawa, 2022-10-29 This book explains how standard micro-founded macroeconomics is misguided and proposes an alternative method based on statistical physics. The Great Recession following the bankruptcy of Lehman Brothers in September 2008 amply demonstrated that mainstream micro-founded macroeconomics was in trouble. The new approach advanced in this book reasonably explains important macro problems such as employment, business cycles, growth, and inflation/deflation. The key concept is demand failures, which modern micro-founded macroeconomics has ignored. Chapter 3 captures analytically a good part of the intuition that underlies the Keynesian economics of people like Tobin and me.

Robert Solow, Emeritus Institute Professor of Economics, Massachusetts Institute of Technology, Nobel Laureate in Economics 1987. Professor Hiroshi Yoshikawa provides a unique synthesis of statistical physics and macro-economic theory in order to confront the dismal failure in economics and in finance to understand how an economy or a financial market works given the heterogeneous decision-making of many different individual interacting actors. Economics has failed in this regard with the naive and often misleading concept of representative agents. The author presents many insights on the historical development, concepts, and errors made by the most illustrious economists in the past. This book should be essential reading for any economics students as well as academic researchers and policy makers who should learn to bring back good sense thinking in their impactful decisions.

Didier Sornette, Professor on the Chair of Entrepreneurial Risks at the Swiss Federal Institute of Technology Zurich, ETH Zurich.
