Curricular Resources and Classroom Use Gabriel J. Stylianides, 2016-05-06 Curricular resources include the different kinds of materials digital or physical that teachers use in or for their teaching textbooks lesson plans etc and have a significant influence on students opportunities to learn At the same time teachers play a crucial role as interpreters of such materials so there is a complex relationship between curricular resources and their classroom use This book aims to bridge these rather disconnected but highly related programs of research by describing comparing and exemplifying new research approaches for studying in connected ways both curricular resources and their classroom use thereby supporting also investigation of the complex interplay between the two In addition to implications for research the book has implications for curriculum development and teacher education Specifically the book deepens understanding of how curriculum developers can better exploit the potential of curricular resources to support classroom work and how teacher educators can better support teachers to use curricular resources in the classroom

Mathematics Curriculum in School Education Yeping Li, Glenda Lappan, 2013-11-19 Mathematics curriculum which is often a focus in education reforms has not received extensive research attention until recently Ongoing mathematics curriculum changes in many education systems call for further research and sharing of effective curriculum policies and practices that can help lead to the improvement of school education This book provides a unique international perspective on diverse curriculum issues and practices in different education systems offering a comprehensive picture of various stages along curriculum transformation from the intended to the achieved and showing how curriculum changes in various stages contribute to mathematics teaching and learning in different educational systems and cultural contexts The book is organized to help readers learn not only from reading individual chapters but also from reading across chapters and sections to explore broader themes including Identifying what is important in mathematics for teaching and learning in different education systems Understanding mathematics curriculum and its changes that are valued over time in different education systems Identifying and analyzing effective curriculum practices Probing effective infrastructure for curriculum development and implementation Mathematics Curriculum in School Education brings new insights into curriculum policies and practices to the international community of mathematics education with 29 chapters and four section prefaces contributed by 56 scholars from 14 different education systems This rich collection is indispensable reading for mathematics educators researchers curriculum developers and graduate students interested in learning about recent curriculum development research and practices in different education systems It will help readers to reflect on curriculum policies and practices in their own education systems and also inspire them to identify and further explore new areas of curriculum research for improving mathematics teaching and learning

Connecting Abstract Algebra to Secondary Mathematics, for Secondary Mathematics Teachers Nicholas H. Wasserman, 2018-12-12 Secondary mathematics teachers are frequently required to take a large number of mathematics courses including advanced mathematics courses such as abstract algebra as part of their initial teacher preparation program and or their continuing professional development The content areas of advanced and secondary mathematics are closely connected Yet despite this connection many secondary teachers insist that such advanced mathematics is unrelated to their future professional work in the classroom This edited volume elaborates on some of the connections between abstract algebra and secondary mathematics including why and in what ways they may be important for secondary teachers Notably the volume disseminates research findings about how secondary teachers engage with and make sense of abstract algebra ideas both in general and in relation to their own teaching as well as offers itself as a place to share practical ideas and resources for secondary mathematics teacher preparation and professional development Contributors to the book are scholars who have both experience in the mathematical preparation of secondary teachers especially in relation to abstract algebra as well as those who have engaged in related educational research The volume addresses some of the persistent issues in secondary mathematics teacher education in connection to advanced mathematics courses as well as situates and conceptualizes different ways in which abstract algebra might be influential for teachers of algebra Connecting Abstract Algebra to Secondary Mathematics for Secondary Mathematics Teachers is a productive resource for mathematics teacher educators who teach capstone courses or content focused methods courses as well as for abstract algebra instructors interested in making connections to secondary mathematics

Digital Curricula in School Mathematics Meg Bates, Zalman Usiskin, 2016-02-01 The mathematics curriculum what mathematics is taught to whom it is taught and when it is taught is the bedrock to understanding what mathematics students can could and should learn Today's digital technology influences the mathematics curriculum in two quite different ways One influence is on the delivery of mathematics through hardware such as desktops laptops and tablets Another influence is on the doing of mathematics using software available on this hardware but also available on the internet calculators or smart phones These developments rapidly increasing in their availability and decreasing in their cost raise fundamental questions regarding a mathematics curriculum that has traditionally been focused on paper and pencil work and taught in many places as a set of rules to be practiced and learned This volume presents the talks given at a conference held in 2014 at the University of Chicago sponsored by the Center for the Study of Mathematics Curriculum The speakers experts from around the world and inside the USA were asked to discuss one or more of the following topics changes in the nature and creation of curricular materials available to students transformations in how students learn and how they demonstrate their learning rethinking the role of the teacher and how students and teachers interact within a classroom and across distances from each other The result is a

set of articles that are interesting and captivating and challenge us to examine how the learning of mathematics can and should be affected by today's technology

Using Design Research and History to Tackle a Fundamental Problem with School Algebra Sinan Kanbir, M. A. (Ken) Clements, Nerida F. Ellerton, 2017-10-28 In this well illustrated book the authors Sinan Kanbir Ken Clements and Nerida Ellerton tackle a persistent and universal problem in school mathematics why do so many middle school and secondary school students find it difficult to learn algebra well What makes the book important are the unique features which comprise the design research approach that the authors adopted in seeking a solution to the problem The first unique feature is that the authors offer an

overview of the history of school algebra Despite the fact that algebra has been an important component of secondary school mathematics for more than three centuries there has never been a comprehensive historical analysis of factors influencing the teaching and learning of that component The authors identify through historical analysis six purposes of school algebra a algebra as a body of knowledge essential to higher mathematical and scientific studies b algebra as generalized arithmetic c algebra as a prerequisite for entry to higher studies d algebra as offering a language and set of procedures for modeling real life problems e algebra as an aid to describing structural properties in elementary mathematics and f algebra as a study of variables They also raise the question whether school algebra represents a unidimensional trait Kanbir Clements and Ellerton offer an unusual hybrid theoretical framework for their intervention study by which seventh grade students significantly improved their elementary algebra knowledge and skills Their theoretical frame combined Charles Sanders Peirce s triadic signifier interpretant signified theory which is in the realm of semiotics with Johann Friedrich Herbart s theory of apperception and Ken Clements and Gina Del Campo s theory relating to the need to expand modes of communications in mathematics classrooms so that students engage in receptive and expressive modes Practicing classroom teachers formed part of the research team This book appears in Springer s series on the History of Mathematics Education Not only does it include an important analysis of the history of school algebra but it also adopts a theoretical frame which relies more on theories from the past than on contemporary theories in the field of mathematics education The results of the well designed classroom intervention are sufficiently impressive that the study might have created and illuminated a pathway for future researchers to take

Researching and Using Progressions (Trajectories) in Mathematics Education, 2019-02-04 The relationship between research and practice has long been an area of interest for researchers policy makers and practitioners alike One obvious arena where mathematics education research can contribute to practice is the design and implementation of school mathematics curricula This observation holds whether we are talking about curriculum as a set of broad

measurable competencies i.e. standards or as a comprehensive set of resources for teaching and learning mathematics. Impacting practice in this way requires fine grained research that is focused on individual student learning trajectories and intimate analyses of classroom pedagogical practices as well as large scale research that explores how student populations typically engage with the big ideas of mathematics over time. Both types of research provide an empirical basis for identifying what aspects of mathematics are important and how they develop over time. This book has its origins in independent but parallel work in Australia and the United States over the last 10 to 15 years. It was prompted by a research seminar at the 2017 PME Conference in Singapore that brought the contributors to this volume together to consider the development and use of evidence based learning progressions trajectories in mathematics education: their basis in theory, their focus and scale and the methods used to identify and validate them. In this volume they elaborate on their work to consider what is meant by learning progressions trajectories and explore a range of issues associated with their development, implementation, evaluation and on going review. Implications for curriculum design and future research in this field are also considered. Contributors are Michael Askew, Tasos Barkatsas, Michael Belcher, Rosemary Callingham, Doug Clements, Jere Confrey, Lorraine Day, Margaret Hennessey, Marj Horne, Alan Maloney, William McGowan, Greg Oates, Claudia Orellana, Julie Sarama, Rebecca Seah, Meetal Shah, Dianne Siemon, Max Stephens, Ron Tzur and Jane Watson.
