Alfaro,Ramon Vilanova,2016-04-16 This book presents a unified methodology for the design of PID controllers that encompasses the wide range of different dynamics to be found in industrial processes This is extended to provide a coherent way of dealing with the tuning of PID controllers The particular method at the core of the book is the so called model reference robust tuning MoReRT developed by the authors MoReRT constitutes a novel and powerful way of thinking of a

robust design and taking into account the usual design trade offs encountered in any control design problem The book starts by presenting the different two degree of freedom PID control algorithm variations and their conversion relations as well as the indexes used for performance robustness and fragility evaluation the bases of the proposed model Secondly the MoReRT design methodology and normalized controlled process models and controllers used in the design are described in order to facilitate the formulation of the different design problems and subsequent derivation of tuning rules In later chapters the application of MoReRT to over damped inverse response integrating and unstable processes is described The book ends by presenting three possible extensions of the MoReRT methodology thereby opening the door to new research developments In this way the book serves as a reference and source book for academic researchers who may also consider it as a stimulus for new ideas as well as for industrial practitioners and manufacturers of control systems who will find appropriate advanced solutions to many application problems

Fuzzy Controllers Handbook Leon Reznik, 1997-08-21 This book teaches you how to design a fuzzy controller and shares the author's experience of design and applications It is the perfect book for you if you want to know something about fuzzy control and fuzzy controllers but you are not a mathematician so what you are really interested in is the design process As an introduction it assumes no preliminary knowledge of fuzzy theory and technology but starts at the root of a problem and works from there If you have some experience in fuzzy controller design but are not sure how to choose the number of membership functions how to shape them properly or how to debug a fuzzy controller if you are a beginner with fuzzy logic and so you would like to know how to apply the theory if you are researching fuzzy logic or if you need some help with a project at work this book is for you The text is designed for use both as a course companion for both teachers and students or for self study Leon Reznik has worked on fuzzy logic applications in a huge range of control situations including spacecraft launch control microprocessor control and metallurgical furnace control Latterly he has been teaching in the Department of Electrical and Electronic Engineering at Victoria University of Technology Australia His work in the area has generated a substantial volume of papers in both Russian and English First readable book on the subject Ideal for professionals and students alike This book takes fuzzy logic out of the ivory tower and into the workplace

International Conference on Advancements of Medicine and Health Care through Technology; 23 - 26 September 2009 Cluj-Napoca, Romania Simona Vlad, Radu V. Ciupa, Anca I. Nicu, 2010-02-01 Projections for advances in medical and biological technology will transform medical care and treatment This in great part is due to the result of the interaction and collaboration between medical sciences and engineering These advances will result in substantial progress in

health care and in the quality of life of the population Frequently however the implications of technologies in terms of increasing recurrent costs additional required support services change in medical practice and training needs are underestimated As a result the widespread irrational use of technologies leads to a wastage of scarce resources and weakens health systems performance To avoid such problems a systematic and effective Health Technology System must be developed and introduced requiring the support and commitment of decision makers of all levels of the health system The MediTech2009 conference aims to provide a special opportunity for the Romanian professionals involved in basic research R D industry and medical applications to exchange their know how and build up collaboration in one of the most human field of science and techniques The conference is intended to be an international forum for researchers and practitioners interested in the advance in and applications of biomedical engineering to exchange the latest research results and ideas in the areas covered by the topics and not only We believe the reader will find the proceedings an impressive document of progress to date in this rapidly changing field
