A Student's Guide to the Seashore J.D. Fish, 2012-12-06 At one time or another we have all been drawn by the fascination of the seashore For the holiday maker the relaxing day by the sea often turns out to be a most rewarding foray among rock pools and dense canopies of seaweed for naturalists and students the shore is one of the most challenging habitats Whatever our interests and expertise one of our first objectives when faced with the diversity of plant and animal life on the shore is to name the individual specimens and we quickly learn that this can be a difficult though rewarding occupation Once an organism has been identified a number of questions naturally follow What is its life cycle How does it feed and reproduce How long does it live The answers to such questions give an insight into the lives of the plants and animals of the shore and are one of the first steps in an understanding of the complexity of the shore environment However the information required to answer such questions is not always easily accessible and even when it is known it is often scattered in various books and research journals making it difficult and time consuming to find Although a variety of identification keys and guides is available some designed for the specialist others for the amateur such texts generally give little if any information on the biology of the organisms

 Ecological Modelling](#) Karline Soetaert, Peter M. J. Herman, 2008-10-14 Mathematical modelling is an essential tool in present
 day ecological research Yet for many ecologists it is still problematic to apply modelling in their research In our experience
 the major problem is at the conceptual level proper understanding of what a model is how ecological relations can be
 translated consistently into mathematical equations how models are solved steady states calculated and interpreted Many
 textbooks jump over these conceptual hurdles to dive into detailed formulations or the mathematics of solution This book
 attempts to fill that gap It introduces essential concepts for mathematical modelling explains the mathematics behind the
 methods and helps readers to implement models and obtain hands on experience Throughout the book emphasis is laid on
 how to translate ecological questions into interpretable models in a practical way The book aims to be an introductory
 textbook at the undergraduate graduate level but will also be useful to seduce experienced ecologists into the world of
 modelling The range of ecological models treated is wide from Lotka Volterra type of principle seeking models to
 environmental or ecosystem models and including matrix models lattice models and sequential decision models All chapters
 contain a concise introduction into the theory worked out examples and exercises All examples are implemented in the open
 source package R thus taking away problems of software availability for use of the book All code used in the book is available

An Editor's Guide to Writing and Publishing Science Michael Hochberg, 2019-07-04 A good research paper is
 more than just a clear concise scientific expose It is a document that needs to go beyond the science to attract attention

There are both strict and less definable norms for doing this but many authors are unaware as to what they are or their use Publishing is rapidly changing and needs to be explained with a fresh perspective Simply writing good clear concise science is no longer enough there is a different mind set now required that students need to adopt if they are to succeed The purpose of this book is to provide the foundations of this new approach for both young scientists at the start of their careers as well as for more experienced scientists to teach the younger generation Most importantly the book will make the reader think in a fresh creative and novel way about writing and publishing science This is an introductory guide suitable for advanced undergraduates graduate students and professional researchers in both the life and physical sciences **Peterson**
