## Lesson Summary

### Describing Populations

**Ecological Systems** Most ecologists study populations. Ecologists study a particular community of living organisms, which include any living individuals, such as an animal.

**Change after Change** They give us a population's size, density, or geographic range. A population's range includes any naturally occurring, but changing, environmental conditions. The ecological system is a population of individuals in a habitat, which is a particular environmental condition. Ecologists do not study a population of individuals but a group of individuals. Ecologists study a population of individuals but not a group of individuals.

**Growth Rate** The number of organisms in a population can change over time, as a new population grows. Population growth can occur rapidly under conditions of a new state, which can be a new state of a population or a new state of a population.
