

OMNICLAVE STERILIZER

MODELS OCM & OCR SOLID STATE

INSTALLATION

Remove screw holding Omniclave to shipping pallet. Discard shipping washers and screws. Attach feet using screws supplied. Insert rubber tips. Plug line cord into any wall or base receptacle. Ground unit to prevent shock by using three-wire plug. Omniclave is designed for use only on alternating current. Fill reservoir to within 2-1/2" below opening of reservoir (approximately 2-1/2 quarts for OCM and approximately 4-1/2 quarts for OCR). Use distilled or demineralized water to eliminate deposits from collecting inside Omniclave. COUNTER SURFACE MUST BE LEVEL TO INSURE PROPER OPERATION.

STEAM STERILIZING

FILL - Open safety door by exerting upward and inward pressure on the handle. Slide bolt to right. Turn lower knob counter-clockwise to FILL. Allow water from previously filled reservoir to enter chamber until water covers fill plate. Turn lower knob to STERILIZE position which also stops flow of water.

LOAD - Load chamber. See paragraph on preparation of materials and loading of chamber. Close and lock door by moving bolt to left and pushing handle down.

SET - Turn middle knob to point where indicator is pointing straight up. When thermometer reaches desired temperature, rotate middle knob counter-clockwise slowly until yellow light goes off. Once set, this step may be eliminated unless it is desired to sterilize at a different pressure and temperature. Turning middle knob clockwise increases temperature and pressure. Turning knob counter-clockwise decreases temperature and pressure. Set timer knob to prescribed time period. See chart for proper temperature-time relationship.

VENT - When bell rings, rotate lower knob to VENT position. Allow all steam to be discharged. (CHAMBER PRESS ZERO)

DRY - Open door about 1/2 inch to permit thorough drying of contents (3-5 minutes). Leave lower knob in VENT position during drying and stand-by periods. Omniclave will be ready for immediate reuse by repeating above steps.

HELPFUL HINTS

1. Omniclave may be pre-heated for rapid starts by turning lower knob to VENT and allowing chamber walls to be heated to temperature before use of Omniclave is required - approximately 30 minutes before or first thing in the morning.
2. Always rotate upper knob (timer) past 30 minutes before setting time.
3. Always rotate lower knob (valve) counter-clockwise.
4. Stand-by periods - leave door closed and leave lower knob in VENT position.
5. Add water to reservoir only when lower knob is in VENT or POWER OFF position. It is advisable to add water as needed to keep reservoir adequately filled.
6. At conclusion of all sterilizing for the day, turn lower knob to POWER OFF.
7. As soon as possible after bell rings at end of sterilizing cycle, turn to VENT position. This practice will prevent the autoclave from boiling dry.
8. Never attempt to turn lower knob from STERILIZE to FILL or from VENT to STERILIZE. Stops are incorporated to prevent knob from being turned in this manner.
9. Safety valve is set for 35 PSI.

DRY HEAT STERILIZATION

LOAD - Load instruments on trays without cloth or paper coverings. Only two trays may be used. Insert auxiliary thermometer door. Use of dry-heat door is essential for measuring proper dry-heat temperature.

SET - Turn lower knob to VENT position. Do not turn through FILL position. Depress button beneath middle knob and turn knob clockwise to "DRY-STER" section until it hits stop. This setting will give a temperature of approximately 350° (see Helpful Hints). Turn counter-clockwise for a lower temperature. Set timer for 60 minutes as soon as thermometer reaches 320°F.

VENT - When bell rings, remove door and unload. If no additional dry heat sterilizing is desired, rotate middle knob into steam section. Button will pop out. Lower knob can then be turned to POWER OFF.

HELPFUL HINTS

1. Middle knob cannot be turned to DRY-STER section unless button is depressed. Button cannot be depressed unless lower knob is in VENT position.
2. When middle knob is in DRY-STER section, lower knob cannot be turned from VENT position.
3. The density of the load will determine the time required to reach sterilizing temperature of 320°. Always distribute load loosely on trays.
