Automated Essay Scoring Mark D. Shermis, Jill C. Burstein, 2003-01-30 This new volume is the first to focus entirely on automated essay scoring and evaluation. It is intended to provide a comprehensive overview of the evolution and state of the art of automated essay scoring and evaluation technology across several disciplines including education testing and measurement, cognitive science, computer science, and computational linguistics. The development of this technology has led to many questions and concerns. Automated Essay Scoring attempts to address some of these questions including: How can automated scoring and evaluation supplement classroom instruction? How does the technology actually work? Can it improve students' writing? How reliable is the technology? How can these computing methods be used to develop evaluation tools? What are the state-of-the-art essay evaluation technologies and automated scoring systems? Divided into four parts, the first part reviews the teaching of writing and how computers can contribute to it. Part II analyzes actual automated essay scorers including e-rater™, Intellimetric, and the Intelligent Essay Assessor. The third part analyzes related psychometric issues, and the final part reviews innovations in the field. This book is ideal for researchers and advanced students interested in automated essay scoring from the fields of testing and measurement, education, cognitive science, language, and computational linguistics.

Computer Analysis of the Auditory Characteristics of Musical Performance Jack J. Heller, Warren C.

Campbell, 1972 *UC Irvine* Jillianne Salaver, Truong Jennifer, 2005 Provides a look at the University of California Irvine from the students' viewpoint.

Teaching and Evaluating Writing in the Age of Computers and High-Stakes Testing Carl Whithaus, 2005-04-27 This book takes on a daunting task: How do writing teachers continue to work toward preparing students for academic and real-world communication situations while faced with the increasing use of standardized high-stakes testing? Teachers need both the technical ability to deal with this reality and the ideological means to critique the information technologies and assessment methods that are transforming the writing classroom. *Teaching and Evaluating Writing in the Age of Computers and High Stakes Testing* serves this dual need by offering a theoretical framework, actual case studies, and practical methods for evaluating student writing. By examining issues in writing assessment ranging from the development of electronic portfolios to the impact of state-wide standards-based assessment methods on secondary and post-secondary courses, this book discovers four situated techniques of authentic assessment that are already in use at a number of locales throughout the United States. These techniques stress interacting with students as communicators using synchronous and asynchronous environments, describing the processes and products of student learning rather than enumerating deficits, situating pedagogy and evaluation within systems that incorporate rather than exclude local variables, and distributing assessment among diverse audiences. By advocating for a flexible system of communication-based assessment in computer-mediated writing instruction, this book validates teachers' and students' experiences with writing and also acknowledges the real-world weight of the new writing components on the SAT and ACT as well as on state-mandated
