Vocabulary: carrying capacity, density-dependent limiting factor. density-independent limiting factor, limiting factor, population, population density

Gizmo Warm-up

A population is a group of individuals of the same species that live in the same area. The size of a population is determined by many factors. In the Rabbit Population by Season Gizmo, you will see how different factors influence how a rabbit population grows and changes.

Select the BAR CHART tab. What is the size of the initial rabbit population?

44.00

spring

- Select the TABLE tab. Click Play (), and allow the simulation to run for one year.
 - A. In which season did the rabbit population increase the most?
 - B. In which season did the rabbit population increase the least? wastern treatment

Activity A:	Get the Gizmo ready	4 3 4
Carrying capacity	Click Reset (≥).	100

Question: What determines how large a population can grow?

 Think about it: A limiting factor is any factor that controls the growth of a population. What do you think. are some of the limiting factors for the rabbit population?

winter, food, predators, space, ect

- Run Gizmo: Select the DESCRIPTION tab. Set the Simulation speed to Fast. Select the GRAPH tab. Click Play, and allow the simulation to run for at least 10 years. (Note: You can use the zoom controls on the right to see the whole graph.)
 - A. Describe how the rabbit population changed over the course of 10 years. increased and staved around 350
 - B. What pattern did you see repeated every year? increase in spring decrease in winter

Jr. Murray, 2013-07-22 Population Dynamics Alternative Models provides a theoretical framework of population dynamics This book contains seven chapters that discuss the controversies surrounding discussions on the explicit view of the subject Chapters 1 and 2 present a general introduction to the terminology the mathematical background and the philosophical approach that lie behind the theoretical development Chapter 3 contains a series of models accounting for variations in population growth rates sizes and fluctuations while Chapter 4 examines a model accounting for the evolution of life history patterns A more detailed examination of the effects of predation on prey populations especially with respect to determining a prey population s maximum sustainable yield is explored in Chapter 5 Chapter 6 highlights the interspecific competition theory in terms of the population dynamics models presented in a previous chapter Chapter 7 summarizes the developments in the population dynamics research studies This work will be of great value to ecologists biologists and population dynamics researchers Population dynamics; proceedings Symposium on Population Dynamics, Mathematics Population Dynamics in Variable Environments Shripad Tuljapurkar, 1985 Research Center, 1972, Population Dynamics and the Tribolium Model: Genetics and Demography Robert F. Costantino, Robert A. Desharnais, 2011-09-17 The study of populations is becoming increasingly focused on dynamics. We believe there are two reasons for this trend. The ftrst is the impactof nonlinear dynamics with its exciting ideas and colorful language bifurcations domains of attraction chaos fractals strange attractors Complexity which is so very much a part of biology now seems to be also a part of mathematics A second trend is the accessibility of the new concepts Thebarriers to communication between theoristandexperimentalistseemless impenetrable The active participation of the experimentalist means that the theory will obtain substance Our role is the application of the theory of dynamics to the analysis ofbiological populations We began our work early in 1979 by writing an ordinary differential equation for the rate of change in adult numbers which was based on an equilibrium model proposed adecadeearlier Duringthenextfewmonths weftlledournotebookswithstraightforward deductions from the model and its associated biological implications Slowly some of the biological observations were explained and papers followed on a variety of topics genetic and demographic stability stationary probability distributions for population size population growth asabirth deathprocess natural selection and density dependent population growth genetic disequilibrium and the stationary stochastic dynamics of adult numbers **Population Dynamics and the Tribolium Model** Robert F Costantino, Robert A Desharnais, 1991-08-01 Population Dynamics: Algebraic and Probabilistic Approach Utkir A. Levin, 1984 Contains lecture notes that were presented at the AMS Short Course on Population Biology held August 6 7 1983 in Albany New York in conjunction with the summer meeting of the American Mathematical Society This title acquaints the reader with the mathematical ideas that pervade various levels of thinking in population biology **Population Dynamics** Mathematics Research Center. Greville, 1972 **Theory of Populations** Alexandr N Tetearing, 2016-11-29 The book is devoted to the theory of development of the biological systems The fundamental equation of life of a biological population based on the general physical principles allows us to get all the basic equations of population dynamics describing the development of the populations under various environmental conditions. The equations describe the population transition that occurred in our human population in the late 20 th century This transition may indicate the fact that the human population consists of two super races the old slow race and new fast growing human race that appeared on Earth relatively recently The separate chapter presents the base classification of predator prey systems The classification consists of ninety six different equation systems. The book is addressed to a broad auditorium of biologists ecologists and demographers as well as readers interested in the development of the biological populations Translated from Russian
