Abstract The purpose of this study was to determine the effect of a 12-week, 30-min, 3 times per week, low-impact aerobically and resistance training program on the physical fitness of 10-year-old children. The study was conducted in a school setting. The study group consisted of 10-year-old children who were randomly selected from a primary school in Istanbul. The control group consisted of 10-year-old children who did not participate in the program. The study group performed a 12-week, 30-min, 3 times per week, low-impact aerobically and resistance training program. The physical fitness of the children was measured at the beginning and at the end of the 12-week program. The results of the study showed that the physical fitness of the children in the study group improved significantly compared to the control group. The study suggests that a 12-week, 30-min, 3 times per week, low-impact aerobically and resistance training program can improve the physical fitness of 10-year-old children.
