 The text consists of ten brief chapters The first five chapters discuss chemical principles in a succinct but scientifically sound

manner The individual instructor is encouraged to elaborate on these topics as he or she sees fit The next two chapters discuss the properties of gases especially the components of air and then issues in air pollution The next two chapters focus on the properties of water and aqueous solutions followed by issues in water pollution The final brief chapter is an attempt to put everything in perspective by discussing human health and the environment Included at the end of each chapter are some suggested readings for those who would like a more detailed discussion of the topics covered A set of discussion type questions ends each chapter Writing science for nonscientists is a difficult task However Baldwin King has used his many years as a chemical educator to produce a text which is clear and eminently readable by non chemists **CRC Handbook of Optical Resolutions via Diastereomeric Salt Formation** David Kozma,2001-10-18 Optically active compounds are gaining ever increasing importance in organic chemistry both in the academic and the industrial arenas The rational synthesis of the growing number of chiral chemicals drugs and natural products demands efficient methods for producing these compounds in an enantiomerically highly pure form Despite the available *Prentice Hall Physical Science Concepts in Action Program Planner National Chemistry Physics Earth Science* ,2003-11 Prentice Hall Physical Science Concepts in Action helps students make the important connection between the science they read and what they experience every day Relevant content lively explorations and a wealth of hands on activities take students understanding of science beyond the page and into the world around them Now includes even more technology tools and activities to support differentiated instruction Chemistry and geology R.
