Hayes, 1996-04-19 This new text responds to the dramatic growth in digital signal processing DSP over the past decade and is the product of many years of teaching an advanced DSP course at Georgia Tech While the focal point of the text is signal modeling it integrates and explores the relationships of signal modeling to the important problems of optimal filtering spectrum estimation and adaptive filtering Coverage is equally divided between the theory and philosophy of statistical signal processing and the algorithms that are used to solve related problems The text reflects the author's philosophy that a deep understanding of signal processing is accomplished best through working problems For this reason the book is loaded with worked examples homework problems and MATLAB computer exercises While the examples serve to illustrate the ideas developed in the book the problems seek to motivate and challenge the student and the computer exercises allow the student to experiment with signal processing algorithms on complex signals Professor Hayes is recognized as a leader in the signal processing community particularly for his work in signal reconstruction and image processing This text is suitable for senior graduate level courses in advanced DSP or digital filtering found in Electrical Engineering Departments Prerequisites include basic courses in DSP and probability theory Mathematical Analysis of Spectral Orthogonality John Kalivas, 1993-10-15 This work provides an integrated treatment of multivariate approximation methods used in quantitative spectral analysis focusing on the multicollinearity problem of spectral measurements It shows how to assess the degree of multicollinearity in a set of spectra and introduces techniques that yield accurate approximations even in the presence of poor spectral orthogonality

Templates for the Solution of Algebraic Eigenvalue Problems Zhaojun Bai,James Demmel,Jack Dongarra,Axel Ruhe,Henk van der Vorst,2000-01-01 Large scale problems of engineering and scientific computing often require solutions of eigenvalue and related problems This book gives a unified overview of theory algorithms and practical software for eigenvalue problems It organizes this large body of material to make it accessible for the first time to the many nonexpert users who need to choose the best state of the art algorithms and software for their problems Using an informal decision tree just enough theory is introduced to identify the relevant mathematical structure that determines the best algorithm for each problem
