Crimes of the Educators Samuel Blumenfeld, Alex Newman, 2025-01-17. Utopian dictators like Stalin, Hitler, Pol Pot, and Mao are criminals, genocidal psychopaths who have killed more human beings in the last hundred years than any other ideologues in history. They don't limit their murder to individuals but to entire nations. In the United States, another form of utopians, the progressives have tried to destroy traditional America by strategically dumbing down her people. America's future is being crippled on purpose in order to fundamentally transform the nation, its values, and its system of government. Laid out a century ago by progressive luminary John Dewey, the fruits of his schemes are plain to see today. Dewey got rid of the traditional intensive phonics method of instruction and imposed a look-say-sight or whole word method that forces children to read English as if it were Chinese. The method is widely used in today's public schools, which is a major reason there are so many failing public schools that cannot teach children the basics. This can only be considered a blatant form of child abuse. American author and veteran educator Samuel Blumenfeld and journalist Alex Newman have taken on the public education establishment as never before and exposed it for the de facto criminal enterprise it is. *Crimes of the Educators* reveals how the architects of America's public school disaster implemented a plan to socialize the United States by knowingly and willingly dumbing down the population, a mission closer to success than ever as the Obama administration works relentlessly to nationalize K-12 schooling with Common Core. The whole word method of teaching children to read, introduced by John Dewey and colleagues in the early twentieth century and which permeates Common Core, is a significant cause of dyslexia among students. Public education's war against religion, the great American math disaster, promotion of death education, and the government's plan to lower standards for all so no one is left behind is destroying the logic, reasoning, and overall educational prowess of America's next generation. According to the Program for International Student Assessment, which collects test results from 65 countries for its rankings, in reading, students in 19 other locales scored higher than U.S. students. In science, 22 education systems scored above the U.S. In mathematics, 29 nations and other jurisdictions outperformed the United States. Journalist Henry Mencken said it best in 1924 when he wrote that the aim of public education is to reduce as many individuals as possible to the same safe level to breed and train a standardized citizenry to put down dissent and originality. It is time to hold the Department of Education accountable for the crimes of the educators.

Mathematical Reviews, 2000. Arithmetic Counts! Paul Shoecraft, 2025-01-24. Dr. Shoecraft may be the only mathematician since the New Math in the 1960s to seriously analyze the lowly subject of arithmetic and how to teach it. His breakthrough came when he experimented with teaching what needs to be

understood instead of known memorized like teaching why addition problems until the algorithm they are using supposedly becomes cemented in their brains By teaching the essence of arithmetic in sensible ways and appealing to children s love of games songs and movement he s proven that virtually ALL children can learn arithmetic the foundation of algebra higher mathematics science technology and more even music When children understand arithmetic they own it It s no lonver just their teacher s math It s their math America s children are being held back in math because of how arithmetic is drug out in elementary school Virtually every textbook based elementary school math program in use today is mind numbing in its repetitiveness from grade to grade The reason for the redundancy is to slow down the teaching of arithmetic so it can be memorized Research shows that the human brain is not designed to remember things learned by rote when no longer practiced That s acknowledged in the use it or lose it aphorism that states the obvious that we remember what we use and forget what we don t You know that to be true if you ve ever forgotten things you once knew as well as your own name things like an old address or a license plate number Every child can understand base ten numeration when taught hands on with arithmetic blocks Thereby every child can understand base ten arithmetic And every child can learn how to count out the number facts like 5 7 12 17 8 9 6 X 7 42 and 56 7 8 and if they forget one never have to guess and risk ridicule and bad grades if they guess wrong What matters in teaching arithmetic is not how much a child can remember but how much they can figure out if when they forget
