The Ethics of Personalised Medicine Jochen Vollmann, Verena Sandow, Jan Schildmann, 2016-03-09 In recent times the phrase personalised medicine has become the symbol of medical progress and a label for better health care in the future. However, a controversial debate has developed around whether these promises of better, more personal and more cost-efficient medicine are realistic. This book brings together leading researchers from across Europe and North America from both normative and empirical disciplines who take a more critical view of the often encountered hype associated with personalised medicine. Partially drawing on a four-year collaborative research project funded by the German Ministry for Education and Research, the book presents a multidisciplinary debate on the current state of research on the ethical, legal and social implications of personalised medicine. At a time when future health care is a topic of much discussion, this book provides valuable policy recommendations for the way forward. This study will be of interest to researchers from various disciplines including philosophy, bioethics, law and social sciences.

Microbiome Interplay and Control Christine Moissl-Eichinger, Gabriele Berg, Martin Grube, 2018-07-05 In complex systems such as our body or a plant, the host is living together with thousands of microbes which support the entire system in function and health. The stability of a microbiome is influenced by environmental changes, introduction of microbes and microbial communities or other factors. As learned in the past, microbial diversity is the key, and low-diverse microbiomes often mirror out-of-control situations or disease. It is now our task to understand the molecular principles behind the complex interaction of microbes in and around us in order to optimize and control the function of the microbial community by changing the environment or the addition of the right microorganisms. This Research Topic focuses on studies including e.g. original research perspectives, mini reviews and opinion papers that investigate and discuss:

1. The role of the microbiome for the host-environmental system
2. The exchange and change of microbes and microbial communities
3. The influence of external factors toward the stability of a microbiome
4. Methods, possibilities and approaches to change and control a system's microbiome e.g. in human

or plant disease 5 Experimental systems and approaches in microbiome research The articles span the areas human health and disease animal and plant microbiomes microbial interplay and control methodology and the built environment microbiome
