November 2013 Physical Science Paper 1

Scott C. Dulebohn

November 2013 Physical Science Paper 1:

The Age of Scientific Naturalism Bernard Lightman, Michael S. Reidy, 2016-02-19 Physicist John Tyndall and his contemporaries were at the forefront of developing the cosmology of scientific naturalism during the Victorian period. They rejected all but physical laws as having any impact on the operations of human life and the universe. Contributors focus on the way Tyndall and his correspondents developed their ideas through letters, periodicals and scientific journals and challenge previously held assumptions about who gained authority and how they attained and defended their position within the scientific community.

What We Think About When We Try Not To Think About Global Warming Per Espen Stoknes, 2015. Today about 98 percent of scientists affirm that climate change is human made and about 2 percent still question it. Despite that overwhelming majority, though about half the population of rich countries like ours choose to believe the 2 percent. And paradoxically this large camp of deniers grows even larger as more and more alarming proof of climate change has cropped up over the last decades. This disconnect has both climate scientists and activists scratching their heads, growing anxious and responding usually by repeating more facts to win the argument. But the more climate facts pile up, the greater the resistance to them grows and the harder it becomes to enact measures to reduce greenhouse gas emissions and prepare communities for the inevitable change ahead. Is humanity up to the task? It is a catch 22 that starts, says psychologist and climate expert Per Espen Stoknes, from an inadequate understanding of the way most humans think, act and live in the world around them. With dozens of examples he shows how to retell the story of climate change and apply communication strategies more fit for the task. Publisher's description.

Reading as a Philosophical Practice Robert Piercey,2020-12-15 Reading as a Philosophical Practice asks why reading everyday reading for pleasure matters so profoundly to so many people Its answer is that reading is an implicitly philosophical activity To passionate readers it is a way of working through and taking a stand on certain fundamental questions about who and what we are how we should live and how we relate to other things The book examines the lessons that the activity of reading seems to teach about selfhood morality and ontology and it tries to clarify the sometimes paradoxical claims that serious readers have made about it To do so it proposes an original theoretical framework based on Virginia Woolf s notion of the common reader and Alasdair MacIntyre s conception of practice It also asks whether reading can continue to play this role as paper is replaced by electronic screens
