Congress. House. Committee on Oversight and Government Reform. Subcommittee on Federal Workforce, Postal Service, and the District of Columbia, 2009 **Counseling the Nursing Mother** Judith Lauwers, Anna Swisher, 2010-07-12 *Pregnancy and Postpartum Considerations for the Veterinary Team* Emily Singler, 2023-11-09

Precautions often apply to pregnancy in any workplace but being a vet in practice presents additional specific risks There are concerns and uncertainty about potential hazards from radiation and inhalant anesthesia exposure to zoonoses and the additional mental stress in a profession that already carries high suicide risk This book reviews considerations for professionals in clinical veterinary medicine large and small animal while pregnant and after giving birth Veterinarian and veterinary writer consultant and mentor Dr Emily Singler speaks directly to veterinary team members veterinarians technicians CSRs assistants students who are pregnant or plan to become pregnant She delivers scientific information on the specific risks to the mother and baby that may be encountered during pregnancy while working in veterinary medicine with some of her own and others experiences to add perspective and humor The book also covers topics related to mental health challenges announcing a pregnancy and planning for parental leave navigating the fourth trimester and returning to work We hope that having read this book veterinary professionals whether pregnant or working with pregnant colleagues will feel better supported and empowered to make informed decisions *Playing against Nature* Seth Stein, Jerome Stein, 2014-04-09

Defending society against natural hazards is a high stakes game of chance against nature involving tough decisions How should a developing nation allocate its budget between building schools for towns without ones or making existing schools earthquake resistant Does it make more sense to build levees to protect against floods or to prevent development in the areas at risk Would more lives be saved by making hospitals earthquake resistant or using the funds for patient care What should scientists tell the public when as occurred in L'Aquila Italy and Mammoth Lakes California there is a real but small risk of an upcoming earthquake or volcanic eruption Recent hurricanes earthquakes and tsunamis show that society often handles such choices poorly Sometimes nature surprises us when an earthquake hurricane or flood is bigger or has greater effects than expected from detailed hazard assessments In other cases nature outsmarts us doing great damage despite expensive mitigation measures or causing us to divert limited resources to mitigate hazards that are overestimated Much of the

problem comes from the fact that formulating effective natural hazard policy involves combining science economics and risk analysis to analyze a problem and explore the costs and benefits of different options in situations where the future is very uncertain Because mitigation policies are typically chosen without such analysis the results are often disappointing This book uses general principles and case studies to explore how we can do better by taking an integrated view of natural hazards issues rather than treating the relevant geoscience engineering economics and policy formulation separately Thought provoking questions at the end of each chapter invite readers to confront the complex issues involved Readership Instructors researchers practitioners and students interested in geoscience engineering economics or policy issues relevant to natural hazards Suitable for upper level undergraduate or graduate courses Additional resources can be found at <http://www.wiley.com/go/SteinPlayingagainstnature> **New Scientist and Science Journal**, 2009 **# I'm Zombie** Tony
