Predator-Prey Population Simulation

Pre-lab

Read the Predator-Prey Simulation Student Guide (assumptions and procedure). After reading the information on the classroom copy of the student guide, answer the following pre-lab questions before starting the activity.

1. What habitat is represented by the petri dish in this activity?
2. Which animal do the beads represent?
3. Which animal does the spoon represent?
4. As you do this simulation, you will be changing the number of beads in the dish and using the spoon to represent one or more predators during a generation. It is VERY important that you follow the assumptions and procedure closely for this activity to work. According to the assumptions:
 - a. AT LEAST how many mice are initially present in the meadow for each generation?
 - b. What is the maximum number of mice that can be in the meadow?
 - c. Surviving mice of a generation always double their numbers. If you have 8 surviving mice in your dish after one generation, how many mice will you need in the dish to start the next generation?
 - d. AT LEAST how many weasels are initially present in the meadow for each generation?
 - e. How many mice does a weasel need to capture to survive?
 - f. When will weasels produce offspring?
5. According to the procedure:
 - a. What materials (and how many of each) will you start with?
