databases and design **An Introduction to Hopf Algebras** Robert G. Underwood, 2011-08-28 With wide ranging connections to fields from theoretical physics to computer science Hopf algebras offer students a glimpse at the applications of abstract mathematics This book is unique in making this engaging subject accessible to advanced undergraduate and beginning graduate students After providing a self contained introduction to group and ring theory the book thoroughly treats the concept of the spectrum of a ring and the Zariski topology In this way the student transitions smoothly from basic abstract algebra to Hopf algebras The importance of Hopf orders is underscored with applications to algebraic number theory Galois module theory and the theory of formal groups By the end of the book readers will be familiar with established results in the field and ready to pose research questions of their own Fast Reliable Algorithms for Matrices with Structure T. Kailath, A. H. Sayed, 1999-01-01 This book is the first to pay special attention to the combined issues of speed and numerical reliability in algorithm development These two requirements have often been regarded as competitive so much so that the design of fast and numerically reliable algorithms for large scale structured systems of linear equations in many cases remains a significant open issue Fast Reliable Algorithms for Matrices with Structure helps bridge this gap by providing the reader with recent contributions written by leading experts in the field The authors deal with both the theory and the practice of fast numerical algorithms for large scale structured linear systems Each chapter covers in detail different aspects of the most recent trends in the theory of fast algorithms with emphasis on implementation and application issues Both direct and iterative methods are covered This book is not merely a collection of articles The editors have gone to considerable lengths to blend the individual papers into a consistent presentation Each chapter exposes the reader to some of the most recent research while providing enough background material to put the work into proper context *Formal Methods for the Design of Real-Time Systems* Marco Bernardo, Flavio Corradini, 2004-12-07 A large class of computing systems can be specified and verified by abstracting away from the temporal aspects of their behavior In real time systems instead time issues become essential Their correctness depends not only on which functions they can perform but also on the action execution time Due to their importance and design challenges real time systems have attracted the attention of a considerable number of computer scientists and engineers from various research areas This volume collects a set of papers accompanying the lectures of the fourth edition of the International School on Formal Methods for the Design of Computer Communication and Software Systems SFM The school addressed the use of formal methods in computer science as a prominent approach to the rigorous design of computer communication and software systems The main aim of the SFM series is to offer a good spectrum of current research in foundations as well as applications of formal methods which can be of help for graduate students and young researchers who intend to approach the field SFM 04 RT was devoted to real time systems It covered formal models and languages for the specification modeling analysis and verification of the set of critical systems the expressiveness of such models and languages as well as supporting tools and related applications in different domains

Financial Engineering and Computation Yuh-Dauh Lyuu, 2002 A comprehensive text and reference first published in 2002 on the theory of financial engineering with numerous algorithms for pricing risk management and portfolio management

Relational and Algebraic Methods in Computer Science Peter Höfner, Peter Jipsen, Wolfram Kahl, Martin Eric Müller, 2014-04-08 This book constitutes the proceedings of the 14th International Conference on Relational and Algebraic Methods in Computer Science RAMiCS 2014 held in Marienstatt Germany in April May 2014 The 25 revised full papers presented were carefully selected from 37 submissions The papers are structured in specific fields on concurrent Kleene algebras and related formalisms reasoning about computations and programs heterogeneous and categorical approaches applications of relational and algebraic methods and developments related to modal logics and lattices Proceedings of the Ninth Annual ACM-SIAM Symposium on Discrete Algorithms Howard Karloff, 1998-01-01 This symposium is jointly sponsored by the ACM Special Interest Group on Algorithms and Computation Theory and the SIAM Activity Group on Discrete Mathematics **Conference Record of POPL '96**, 1996 **Informatics** Reinhard Wilhelm, 2003-06-29 Informatics 10 Years Back 10 Years Ahead presents a unique collection of expository papers on major current issues in the field of computer science and information technology The 26 contributions written by leading researchers on personal invitation assess the state of the art of the field by looking back over the past decade presenting important results identifying relevant open problems and developing visions for the decade to come This book marks two remarkable and festive moments the 10th anniversary of the International Research and Conference Center for Computer Science in Dagstuhl Germany and the 2000th volume published in the Lecture Notes in Computer Science series **Mathematical Foundations of Computer Science 1996** Wojciech Penczek, Andrzej Szalas, 1996-08-07 This book constitutes the refereed proceedings of the 21st International Symposium on Mathematical Foundations of Computer Science MFCS 96 held in Crakow Poland in September 1996 The volume presents 35 revised full papers selected from a total of 95 submissions together with 8 invited papers and 2 abstracts of invited talks The papers included cover issues from the whole area of theoretical computer science with a certain emphasis on mathematical and logical foundations The 10 invited presentations are of particular value *Research Directions in Parallel Functional Programming* Kevin Hammond, Greg Michaelson, 2012-12-06 Programming is hard Building a large program is like constructing a steam locomotive through a hole the size of a postage stamp An artefact that is the fruit of hundreds of person years is only ever seen by anyone through a lOO line window In some ways it is astonishing that such large systems work at all But parallel programming is much much harder There are so many more things to go wrong Debugging is a nightmare A bug that shows up on one run may never happen when you are looking for it but unfailingly returns as soon as your attention moves elsewhere A large fraction of the program s code can be made up of marshalling and coordination algorithms The core application can easily be obscured by a maze of plumbing Functional programming is a radical elegant high level attack on the programming problem Radical because it dramatically eschews side effects elegant

because of its close connection with mathematics high level because you can say a lot in one line But functional programming is definitely not yet mainstream That's the trouble with radical approaches it's hard for them to break through and become mainstream But that doesn't make functional programming any less fun and it has turned out to be a wonderful laboratory for rich type systems automatic garbage collection object models and other stuff that has made the jump into the mainstream

Programming Languages and Systems S. Doaitse Swierstra, 1999-03-10 This is the second time that of ESOP has formed part of the ETAPS cluster of conferences workshops working group meetings and other associated activities One of the results of colocating so many conferences is a reduction in the number of possibilities to submit a paper to a European conference and the increased competition between conferences that occurs when boundaries between individual conferences have not yet become well established This may have been the reason for the fact that only 44 submissions were received this year On the other hand we feel that the average quality of submissions has gone up and thus the program committee was able to select 18 good papers only one less than the year before The program committee did not meet physically and all discussion was done using a Web driven database system Despite some mixed feelings there is an overall tendency to appreciate the extra time available for giving papers a second look and really going into comments made by other program committee members I want to thank my fellow program committee members for the work they have put into the refereeing process and the valuable feedback they have given to authors I want to thank the referees for their work and many detailed comments and finally I want to thank everyone who has submitted a paper without authors no conference

Scientific Computing with MATLAB and Octave Alfio Quarteroni, Fausto Saleri, 2007-06-21 Preface to the First Edition This textbook is an introduction to Scientific Computing We will illustrate several numerical methods for the computer solution of certain classes of mathematical problems that cannot be faced by paper and pencil We will show how to compute the zeros or the integrals of continuous functions solve linear systems approximate functions by polynomials and construct accurate approximations for the solution of differential equations With this aim in Chapter 1 we will illustrate the rules of the game that computers adopt when storing and operating with real and complex numbers vectors and matrices In order to make our presentation concrete and appealing we will adopt the programming environment MATLAB as a faithful companion We will gradually discover its principal commands statements and constructs We will show how to execute all the algorithms that we introduce throughout the book This will enable us to furnish an immediate quantitative assessment of their theoretical properties such as stability accuracy and complexity We will solve several problems that will be raised through exercises and examples often stemming from scientific applications
