Environment, 2014 *General Catalogue of Printed Books* British Museum. Department of Printed Books, 1969 *Tectonic Evolution of Northwestern México and the Southwestern USA* Scott E. Johnson, 2003 From the Islands to the Mountains Richard V. Heermance, Joshua J. Schwartz, 2020-06-03 This volume includes five geologic field trip guides in the Los Angeles region associated with the 2020 GSA Cordilleran Section Meeting that was scheduled for May 2020 in Pasadena California. The guides are organized in a generally counterclockwise order around the Los Angeles Basin. The first guide by Burgette et al provides new slip rates, age constraints and observations of the active Sierra Madre fault zone that borders the northern side of the San Gabriel and San Fernando Valleys. The Nourse et al guide takes a new look at the San Gabriel Mountains from a basement and geomorphologic perspective. Further west Keller et al provide one of the first published field trip guides focused on the 9 January 2018 Montecito debris flows that caused 23 deaths. The volume then moves south to Santa Cruz Island where Davis et al provide an updated review of the island's geology within the California borderlands. The final guide returns to the east where Platt et al present the unique geology of Santa Catalina Island with a focus on the subduction related Catalina Schist website *Fundamentals of Environmental and Toxicological Chemistry* Stanley E. Manahan, 2013-02-25 Fundamentals of Environmental and Toxicological Chemistry Sustainable Science Fourth Edition covers university level environmental chemistry with toxicological chemistry integrated throughout the book. This new edition of a bestseller provides an updated text with an increased emphasis on sustainability and green chemistry. It is organized based on the five spheres of Earth's environment: 1 the hydrosphere (water), 2 the atmosphere (air), 3 the geosphere (solid Earth), 4 the biosphere (life), and 5 the anthrosphere (the part of the environment made and used by humans). The first chapter defines environmental chemistry and each of the five environmental spheres. The second chapter presents the basics of toxicological chemistry and its relationship to environmental chemistry. Subsequent chapters are grouped by sphere, beginning with the hydrosphere and its environmental chemistry (water pollution, sustainability, and water as nature's most renewable resource). Chapters then describe the atmosphere (its structure and importance for protecting life on Earth, air pollutants, and the sustainability of atmospheric quality). The author explains the nature of the geosphere and discusses soil for growing food as well as geosphere sustainability. He also describes the biosphere and its sustainability. The final sphere described is the anthrosphere. The text explains human influence on the environment, including climate pollution, in and by the anthrosphere, and means of sustaining this sphere. It also discusses renewable, nonpolluting energy and introduces workplace monitoring. For readers needing additional basic chemistry background, the book includes two chapters on general chemistry and organic chemistry. This updated edition includes three new chapters, new examples and figures, and many new homework problems.

U.S. Geological Survey Bulletin, 1983 Basement Tectonics 8 Mervin J. Bartholomew, Donald W. Hyndman, David W. Mogk, Robert Mason, 2012-12-06 The 8th International Conference on Basement Tectonics was held in Butte, Montana, August 8-12, 1988. Historically, basement tectonics conferences have focused on such topics as reactivation of faults, the influence of

basement faults on metallogeny and hydrocarbon accumulation and the use of geophysical and remote sensing techniques to interpret subsurface and surface geology The 8th Conference diverged from past conferences in that a unifying theme was selected Because ancient major terrane or cratonic boundaries are often postulated to be fault zones which are subsequently reactivated the conference was organized to examine all aspects of ancient continental margins and terrane boundaries and to compare younger Mesozoic ones about which more is known with older Paleozoic and Precambrian ones Moreover because the 8th Conference was held in the northwestern United States a greater emphasis was placed on the Mesozoic margin of western North America and the North American shield The seven oral sessions and four poster sessions all dealt with aspects of the conference theme characterization and comparison of ancient continental margins The organizers extend their thanks to those individuals who graciously consented to serve as moderators for the oral sessions John M Bartley Mark S Gettings M Charles Gilbert John M Guilbert Donald W Hyndman William P Leeman Robert Mason and A Krishna Sinha The program with abstracts volume was prepared by S E Lewis and M J Bartholomew

Hyperspectral Remote Sensing of Vegetation Prasad S. Thenkabail, John G. Lyon, 2016-04-19 Hyperspectral narrow band or imaging spectroscopy spectral data are fast emerging as practical solutions in modeling and mapping vegetation Recent research has demonstrated the advances in and merit of hyperspectral data in a range of applications including quantifying agricultural crops modeling forest canopy biochemical properties detecting crop stress and disease mapping leaf chlorophyll content as it influences crop production identifying plants affected by contaminants such as arsenic demonstrating sensitivity to plant nitrogen content classifying vegetation species and type characterizing wetlands and mapping invasive species The need for significant improvements in quantifying modeling and mapping plant chemical physical and water properties is more critical than ever before to reduce uncertainties in our understanding of the Earth and to better sustain it There is also a need for a synthesis of the vast knowledge spread throughout the literature from more than 40 years of research Hyperspectral Remote Sensing of Vegetation integrates this knowledge guiding readers to harness the capabilities of the most recent advances in applying hyperspectral remote sensing technology to the study of terrestrial vegetation Taking a practical approach to a complex subject the book demonstrates the experience utility methods and models used in studying vegetation using hyperspectral data Written by leading experts including pioneers in the field each chapter presents specific applications reviews existing state of the art knowledge highlights the advances made and provides guidance for the appropriate use of hyperspectral data in the study of vegetation as well as its numerous applications such as crop yield modeling crop and vegetation biophysical and biochemical property characterization and crop moisture assessment This comprehensive book brings together the best global expertise on hyperspectral remote sensing of agriculture crop water use plant species detection vegetation classification biophysical and biochemical modeling crop productivity and water productivity mapping and modeling It provides the pertinent facts synthesizing findings so that readers can get the correct picture on issues such as the best

wavebands for their practical applications methods of analysis using whole spectra hyperspectral vegetation indices targeted to study specific biophysical and biochemical quantities and methods for detecting parameters such as crop moisture variability chlorophyll content and stress levels A collective knowledge bank it guides professionals to adopt the best practices for their own work

Field Geology Education Steven J. Whitmeyer, David W. Mogk, Eric J. Pyle, 2009-01-01 Field instruction has traditionally been at the core of the geoscience curriculum The field experience has been integral to the professional development of future geoscientists and is particularly important as it applies to student understanding of spatial temporal and complex relations in the Earth system As important as field experiences have been to geosciences education and the training of geoscientists the current situation calls for discipline wide reflection of the role of field experiences in the geoscience curriculum in light of practical and logistical challenges evolution in employment opportunities for geoscientists and changing emphases in the geoscience curriculum This volume seeks to broaden participation in field instruction by showcasing diverse approaches to teaching in the field across the many geo disciplines encompassed by GSA books
