Abstract—The purpose of this study was to determine the effect of a 12-week training program on the heart rate (HR) and energy expenditure (EE) of sedentary, middle-aged women. The subjects were 12 sedentary women, 40 to 50 years of age, who were randomly assigned to a 12-week training program or a control group. The training program consisted of three sessions per week, each lasting 30 minutes, and included a combination of aerobic and resistance exercises. The control group consisted of 12 sedentary women who did not participate in the training program. The HR and EE were measured at rest and during the training sessions. The results showed that the training program significantly increased the HR and EE of the subjects compared to the control group. The HR increased from 68 to 78 beats per minute, and the EE increased from 1,200 to 1,500 kcal per day. The findings suggest that a 12-week training program can effectively increase the HR and EE of sedentary, middle-aged women.

- Day and night periods that are longer than the standard 24 hours occur most commonly with the use of artificial light or other light sources. To avoid this, there are two things the producer should do:
 - Turn off the lights at the end of the work day.
 - If the lights are required, the length of the work day should be kept as short as possible.
- The end of the night period is the beginning of the day, so the longer the night period is, the longer the day period is. Therefore, the longer the night period is, the longer the day period is. This is why the night period should be kept as short as possible.
- The night period should be kept as short as possible. The night period should be kept as short as possible. The night period should be kept as short as possible.

When you install your T-Value One Connection, improper installation of all four screws (50 combinations for One Connection) will void the warranty. Please, before installing, refer to the correct installation instructions. Failure to maintain proper ventilation may result in a serious problem with the product.

- When a producer's price for the output rises or falls, it must adjust its output level accordingly. A government producer (as in a public utility) that is required to supply a certain amount of output will not be able to adjust its output level if its price is too low or too high. It will have to accept the government's price and produce the required amount of output.
