For example, when our family need money to have some medical treatment, we can take out our money to help them for their medical treatment. So, we do not need to borrow money from anywhere from people, we can use the money that we save to solve the problem. In addition, we should save money for our future. So, we will not be troublesome when we need to buy. After we marry, we would have our children. We will need many money for our children. We need money for the milk, fees and many more. When they go study, we will need to pay for their fees, tuition and their books. So, saving money is important for our future. Furthermore, we save money can use to go for travel.

After we had hardworking earn money and busy for the life everyday, we should have to relax ourselves such as travel. If we have save money every month, we will have money to go travel. We can bring our family to go for travel and make the relationship to be closer. So, we can know more about our family and can live happily. We can relax ourselves after our hard work. So, if we save money, we can go travel and relax ourselves. There is another benefit of saving money. Besides, saving money can let us do not use our parents' money.

We are adult already. So, we must save money and do not take money from parents anymore. Although we are studying now, we can try not to take money from them. Not only like that, we can save some money as we can to buy some present for our parents when their birthday. They will feel very happy if they get present from us. So, saving money can help us to let them happy. In conclusion, saving money bring many benefit to us. So, we should save money to let us have moeny to use when we need. Kotlikoff, 2001-06-22 This collection of essays coauthored with other distinguished economists offers new perspectives on saving intergenerational economic ties retirement planning and the distribution of wealth The book links life cycle microeconomic behavior to important macroeconomic outcomes including the roughly 50 percent postwar decline in America's rate of saving and its increasing wealth inequality The book traces these outcomes to the government's five decade long policy of transferring in the form of annuities ever larger sums from young savers to old spenders The book presents new theoretical and empirical analyses of altruism that rule out the possibility that private intergenerational transfers have offset those by the government While rational life cycle behavior can explain broad economic outcomes the book also shows that a significant minority of households fail to make coherent life cycle saving and insurance decisions These mistakes are compounded by reliance on conventional financial planning tools which the book compares with Economic Security Planner ESPlanner a new life cycle financial planning software program The application of ESPlanner to U S data indicates that most

Americans approaching retirement age are saving at much lower rates than they should be given potential major cuts in Social Security benefits
