Education,1956 *Liberalising the Accounting Curriculum in University Education* Alan Sangster,Richard M.S.
Wilson,2014-10-29 This book presents the views of accounting educators accounting education policy makers and accounting
practitioners from across the world on the challenging topic of liberalising the accounting curriculum within university
education Accounting is a relatively new subject within universities and has been absorbed into a high level of education
without any real attempt to do so within the traditional ethos of a liberal arts education In this book the logic of teaching
using the liberal arts is described and contrasted with the practical vocational training approach of teaching which has
formed the foundation of accountancy courses for many years A proposal to change this established practice by integrating
the liberal arts into the university accounting curriculum is followed by a series of short chapters which address the
relevance validity and worthiness of the proposed approach Comments and counter arguments are then discussed before
further chapters illustrate how the proposed change may be achieved in a variety of different contexts ranging from that of
the global financial crisis which began in 2008 to the inclusion of ethics and sustainability within the accounting curriculum
This book will aid those teaching accounting in universities to improve the design of their accounting degree programmes by
moving away from an excessive emphasis on technical skills towards a broader consideration of a liberal contextualisation of
the accounting curriculum This book was originally published as a special issue of Accounting Education an international

How to cut clutter With an international coterie of contributors including a communication theorist a Big Four practitioner and accounting academics this volume provides an eclectic array of expert analysis and reflection The contributors reveal how accounting communications represent or misrepresent the financial affairs of entities thus presenting a state of the art assessment on each of the main facets of this important topic As such this book will be of interest to a wide range of readers including postgraduate students in management and accounting established researchers in the fields of both accounting and communications and accounting practitioners Advances in Accounting Behavioral Research Khondkar E.

reasoning Central to his discussion are dual process approaches which are debated in cognitive psychology Scholars of these approaches claim that we should distinguish between two distinct processes or systems of the human mind Following this interpretation heuristics are processes which are described as intuitive automatic fast and unconscious They are routinized cognitive processes which are based on experience in certain social environments and thus often exhibit ecological rationality Overall this book picks up an up to date topic in behavioural accounting research which not only is of relevance for researchers but as well for practitioners
