Centering Humanism in STEM Education Bryan

Dewsbury, Susannah McGowan, Sheila S. Jaswal , Desiree Forsythe, 2024-09-24

Research demonstrates that STEM disciplines perpetuate a history of exclusion particularly for students with marginalized identities This poses problems particularly when

science permeates every aspect of contemporary American life Institutions repeated failures to disrupt systemic oppression

in STEM has led to a mostly white cisgender and male scientific workforce replete with implicit and or explicit biases

Education holds one pathway to disrupt systemic linkages of STEM oppression from society to the classroom Maintaining

views on science as inherently objective isolates it from the world in which it is performed STEM education must move

beyond the transactional approaches to transformative environments manifesting respect for students social and educational

capital We must create a STEM environment in which students with marginalized identities feel respected listened to and

valued We must assist students in understanding how their positionality privilege and power both historically and currently

impacts their meaning making and understanding of STEM Interpreting the Comorbidity of Learning Disorders Pierluigi
