Polymerase Chain Reaction

Synopsis

In the Polymerase Chain Reaction (PCR) procedure, you will see through eight steps a cyclic process used to amplify the DNA. Learn the components, the cycle, and how you can track the product using gel electrophoresis. The tests that the computer may use to track the PCR are:

Design test

After designing you will go to the PCR component and design the cycle of the PCR. After that, by using a mixture of thermocycling, you can see the cycle from the cycle screen. It is up to you to test the correct sequence and identify the PCR apparatus.

See the structure of the cycle and the apparatus of PCR

In the computer, you will see the PCR apparatus on the computer. After identifying the structure of the PCR and the apparatus, you can see the PCR apparatus. The experimental process, as well as all the components of the PCR, are:

Identify the components

In the PCR apparatus, you will select your sample and other PCR components from the components. You will also select the PCR apparatus. The PCR apparatus are:

Learning Objectives

In the end of this simulation, you will be able to:

1. Identify the components of the PCR apparatus and the cycle.
2. Identify the PCR apparatus using the PCR apparatus on the computer.
