Wavelet Applications in Chemical Engineering Rodolphe L. Motard, Babu Joseph, 2013-11-27 Increasing emphasis on safety productivity and quality control has provided an impetus to research on better methodologies for fault diagnosis modeling identification control and optimization of chemical process systems One of the biggest challenges facing the research community is the processing of raw sensor data into meaningful information Wavelet analysis is an emerging field of mathematics that has provided new tools and algorithms suited for the type of problems encountered in process monitoring and control The concept emerged in the geophysical field as a result of the need for time frequency analytical techniques It has since been picked up by mathematicians and recognized as a unifying theory for many of the methodologies employed in the past in physics and signal processing I Meyer states Wavelets are without doubt an exciting and intuitive concept The concept brings with it a new way of thinking which is absolutely essential and was entirely missing in previously existing algorithms The unification of the theory from these disciplines has led to applications of wavelet transforms in many areas of science and engineering including pattern recognition signal analysis time frequency decomposition process signal characterization and representation process system modeling and identification control system design analysis and implementation numerical solution of differential equations matrix manipulation About a year ago in talking to various colleagues and co workers it became clear that a number of chemical engineers were fascinated with this new concept

Sustainable Wireless Sensor Networks Yen Kheng Tan, Winston Seah, 2010-12-14 Wireless Sensor Networks came into prominence around the start of this millennium motivated by the omnipresent scenario of small sized sensors with limited power deployed in large numbers over an area to monitor different phenomenon The sole motivation of a large portion of research efforts has been to maximize the lifetime of the network where network lifetime is typically measured from the instant of deployment to the point when one of the nodes has expended its limited power source and becomes inoperational commonly referred as first node failure Over the years research has increasingly adopted ideas from wireless communications as well as embedded systems development in order to move this technology closer to realistic deployment scenarios In such a rich research area as wireless sensor networks it is difficult if not impossible to provide a comprehensive coverage of all relevant aspects In this book we hope to give the reader with a snapshot of some aspects of wireless sensor networks research that provides both a high level overview as well as detailed discussion on specific areas **Ferri's**

Development of Routing Protocols for Mobile Ad Hoc Networks Dhirendra Kumar Sharma, In this book the focus is on the analysis and design of efficient adaptive and scalable routing protocols for Mobile Ad Hoc Networks Next section presents the objective of the work performed in the context of this book The main objective of this book is to develop routing protocols which are appropriate for challenging environment of mobile ad hoc networks Given the inherent characteristics of these networks the solutions must be adaptable to dynamic topologies

efficient with the bandwidth usage scalable and energy efficient when various network parameters are concerned Moreover the focus is also on realistic approaches having relevance in real life deployments This means that the protocols should not be designed merely based on generic assumptions which could lead to incorrect conclusions Network Simulator ns2 34 is the tools which are used to determine that the developed algorithms are implementable in real networks For validation in ad hoc networks a specific scenario should also be mentioned for which the routing protocol has been designed Meeting of these objectives includes providing the perception of the realities of ad hoc networking In addition the proposed solutions should be compared against corresponding solutions found in the literature New solutions must offer better performance with respect to others to be able to contribute something to the research community To summarize the main goal of this book is to improve the knowledge in ad hoc networking by providing solutions which can help in developing new features for MANETs This book will give the details of the methodology employed to achieve the goals

DVB Ulrich Reimers,2013-12-20 Digital Television Digital Television Broadcasting DTVB or Digital Video Broadcasting DVB has become one of the most exciting developments in the area of consumer electronics at the end of the twentieth century The term digital television is not typically used either to describe the digitisation of the production studio or to indicate the advent of digital signal processing in the integrated circuits used in television receivers Rather digital television refers to the source coding of audio data and video signals the channel coding and the methods for the transport of DVB signals via all kinds of transmission media The term normally also embraces the technologies used for the return path from the consumer back to the programme provider techniques for scrambling and conditional access the concepts of data broadcasting the software platforms used in the terminal devices as well as the user interfaces providing easy access to DVB services The aim of this book is to describe the technologies of digital television
