Dinov, 2018-08-27 Over the past decade Big Data have become ubiquitous in all economic sectors scientific disciplines and human activities They have led to striking technological advances affecting all human experiences Our ability to manage understand interrogate and interpret such extremely large multisource heterogeneous incomplete multiscale and incongruent data has not kept pace with the rapid increase of the volume complexity and proliferation of the deluge of digital information There are three reasons for this shortfall First the volume of data is increasing much faster than the corresponding rise of our computational processing power Kryder's law Moore's law Second traditional discipline bounds inhibit expeditious progress Third our education and training activities have fallen behind the accelerated trend of scientific information and communication advances There are very few rigorous instructional resources interactive learning materials and dynamic training environments that support active data science learning The textbook balances the mathematical foundations with dexterous demonstrations and examples of data tools modules and workflows that serve as pillars for the urgently needed bridge to close that supply and demand predictive analytic skills gap Exposing the enormous opportunities presented by the tsunami of Big data this textbook aims to identify specific knowledge gaps educational barriers and workforce readiness deficiencies Specifically it

focuses on the development of a transdisciplinary curriculum integrating modern computational methods advanced data science techniques innovative biomedical applications and impactful health analytics The content of this graduate level textbook fills a substantial gap in integrating modern engineering concepts computational algorithms mathematical optimization statistical computing and biomedical inference Big data analytic techniques and predictive scientific methods demand broad transdisciplinary knowledge appeal to an extremely wide spectrum of readers learners and provide incredible opportunities for engagement throughout the academy industry regulatory and funding agencies The two examples below demonstrate the powerful need for scientific knowledge computational abilities interdisciplinary expertise and modern technologies necessary to achieve desired outcomes improving human health and optimizing future return on investment This can only be achieved by appropriately trained teams of researchers who can develop robust decision support systems using modern techniques and effective end to end protocols like the ones described in this textbook A geriatric neurologist is examining a patient complaining of gait imbalance and posture instability To determine if the patient may suffer from Parkinson s disease the physician acquires clinical cognitive phenotypic imaging and genetics data Big Data Most clinics and healthcare centers are not equipped with skilled data analytic teams that can wrangle harmonize and interpret such complex datasets A learner that completes a course of study using this textbook will have the competency and ability to manage the data generate a protocol for deriving biomarkers and provide an actionable decision support system The results of this protocol will help the physician understand the entire patient dataset and assist in making a holistic evidence based data driven clinical diagnosis To improve the return on investment for their shareholders a healthcare manufacturer needs to forecast the demand for their product subject to environmental demographic economic and bio social sentiment data Big Data The organization s data analytics team is tasked with developing a protocol that identifies aggregates harmonizes models and analyzes these heterogeneous data elements to generate a trend forecast This system needs to provide an automated adaptive scalable and reliable prediction of the optimal investment e g R D allocation that maximizes the company s bottom line A reader that complete a course of study using this textbook will be able to ingest the observed structured and unstructured data mathematically represent the data as a computable object apply appropriate model based and model free prediction techniques The results of these techniques may be used to forecast the expected relation between the company s investment product supply general demand of healthcare providers and patients and estimate the return on initial investments

Desai,Richard H. Gallagher,1983 **Ethics in Higher Education** Rebecca M. Taylor,Ashley Floyd Kuntz,2022-10-18 CHOICE Outstanding Academic Title 2022 In this thought provoking volume editors Rebecca M Taylor and Ashley Floyd Kuntz invite readers to explore the many facets of on campus ethical dilemmas and the careful

nuanced decision making processes required to address them Taylor and Kuntz demonstrate how to apply collaborative multidisciplinary philosophical inquiry to deeply complex issues They present seven normative case studies focusing on a variety of campus quandaries from urgent matters such as Title IX violations and free speech in social media policy to long simmering concerns such as admissions and access and the future of historically Black colleges and universities The editors then bring together a diverse group of scholars and practitioners with a broad array of disciplinary and personal backgrounds to offer their commentary and insight on the cases Leaders in higher education are under immense pressure to respond to campus crises quickly to quell controversy and to avoid the backlash of public scrutiny in an ever shifting sociopolitical terrain Yet in tension with such pressures adequate responses to these dilemmas require leaders to make ethical contextual choices that effectively foster inclusion respect individual and institutional freedoms and promote equity Expanding the scope of inquiry the contributors challenge underlying assumptions raise points that had been omitted from the original cases and imagine alternative solutions Ethics in Higher Education appeals to readers to do the same in the interest of advancing ethical decision making on campuses
