"Progress in Physics," vol. 21, no. 1, 2025 Dmitri Rabounski,Pierre Millette,Andreas Ries,Florentin Smarandache,Larissa Borissova,Ebenezer Chifu, This issue of Progress in Physics features a collection of articles on theoretical and experimental

physics as well as related topics in mathematics. The main theme appears to be a re-evaluation of fundamental concepts in physics, with several papers discussing alternatives to established theories. One article proposes correct solutions for rotating and charged black holes, suggesting they have an oblate spheroid shape rather than being perfectly spherical. Another paper presents a new cosmology framework based on a Krori gravity theory that predicts the Hubble redshift curve without needing concepts like dark energy or expansion. Other topics include an analysis of fundamental forces from numerical relations, a re-examination of quantum mechanics in the microworld, and the feasibility of non-quantum teleportation.
