Current Index to Journals in Education, 1999 *Subject Guide to Books in Print*, 1971 **Films You Saw in School**
Geoff Alexander, 2014-01-10 Millions of dollars in public funds were allocated to school districts in the post Sputnik era for the purchase of educational films resulting in thousands of 16mm films being made by exciting young filmmakers. This book discusses more than 1,000 such films including many available to view today on the Internet. People ranging from adult film stars to noted physicists appeared in them; some notable directors made them; people died filming them; religious entities attempted to ban them; and even the companies that made them tried to censor them. Here this remarkable body of work is classified into seven subject categories within which some of the most effective and successful films are juxtaposed against those that were didactic and plodding treatments of similar thematic material. This book, which discusses specific academic classroom films and genres, is a companion volume to the author's *Academic Films for the Classroom: A History*. McFarland, which discusses the people and companies that made these films. *Science Teaching* Michael R. Matthews, 2015-12-22
Science Teaching argues that science teaching and science teacher education can be improved if teachers know something of the history and philosophy of science and if these topics are included in the science curriculum. The history and philosophy of science have important roles in many of the theoretical issues that science educators need to address: what constitutes an appropriate science curriculum for all students; how science should be taught in traditional cultures; how scientific literacy can be promoted; and the conflict which can occur between science curriculum and deep-seated religious or cultural values and knowledge. Outlining the history of liberal approaches to the teaching of science, Michael Matthews elaborates contemporary curriculum developments that explicitly address questions about the nature and the history of science. He provides examples of classroom teaching and develops useful arguments on constructivism, multicultural science education, and teacher education. **The Best of American Education** United States.
