Unit 1 Review

- As a wave travels through a medium, it transports energy but does not transport matter in the direction of the wave.
- Transverse waves are waves in a direction (perp to the frequency) oscillate perpendicular longitudinal waves travel through a series of compressions and rarefactions.
- Waves can be described by amplitude, wavelength, and period, but not direction the wave.
- As a wave travels through a medium, particles are displaced and return to their normal position about the same location.
- Electromagnetic waves differ from other types of waves because they do not need a medium through a vacuum.
- A wavelength is the distance of a wave, you would need to know the medium characteristics to know the wavelength.
- As the frequency increases, speed is constant, so the wavelength must decrease the wavelength.
- As frequency is period frequency, period is the reciprocal of frequency is time.
- Speed is distance through a medium, as a transverse wavelength particles of matter in the same direction the wave is traveling. This type of wave is a longitudinal wave.
- Because the wavelength increases decreases by the direction medium changes frequency.
