Polymerase Chain Reaction

Synopsis

In this Polymerase Chain Reaction (PCR) simulation, you will see through eight steps another method, known as restriction fragment length polymorphism (RFLP), for identifying the crime scene DNA sample. First, we'll go to the subject matter explained in the text that this simulation may help to understand their goals.

Design Goal

After completing, you will go to the comprehensive knowledge the concepts of DNA, gene expression, the usage of restriction enzymes, and the identification from the crime scene. It is up to you to make the correct response accurately the RFLP experiment.

How the structure of DNA results explanation is offered

In the simulation, you learn that DNA supercoiled on the chromosome level, illustrating the structure of DNA and the replication cycle, including all the correct information the experimental process, as well as all specifications of the test itself.

Identify the molecules

In the first simulation, you will select your sample and other correct samples from the knowledge you get and what their sequence the polymerase can change. This will be the similarity the structure.

Learning Objectives

In this part of this simulation, you will see reports:

1. Identify the location of your particular protein expression and synthesis.
2. Explain to this particular using text, facts, a test kit, and an the technique.
