Physical Science Paper 2014 Memo Grade December:

Breaking Point Rebecca Schwartz Greene, 2023-01-03 WINNER SOCIETY FOR MILITARY HISTORY DISTINGUISHED BOOK AWARDS FIRST BOOK This book informs the public for the first time about the impact of American psychiatry on soldiers during World War II Breaking Point is the first in depth history of American psychiatry in World War II Drawn from unpublished primary documents oral histories and the author's personal interviews and correspondence over years with key psychiatric and military policymakers it begins with Franklin Roosevelt's endorsement of a universal Selective Service psychiatric examination followed by Army and Navy pre and post induction examinations Ultimately 2.5 million men and women were rejected or discharged from military service on neuropsychiatric grounds Never before or since has the United States engaged in such a program In designing Selective Service Medical Circular No 1 psychiatrist Harry Stack Sullivan assumed psychiatrists could predict who might break down or falter in military service or even in civilian life thereafter While many American and European psychiatrists questioned this belief and huge numbers of American psychiatric casualties soon raised questions about screening's validity psychiatric and military leaders persisted in 1942 and 1943 in endorsing ever tougher screening and little else Soon families complained of fathers and teens being drafted instead of being identified as psychiatric 4Fs and Blacks and Native Americans among others complained of bias A frustrated General George S Patton famously slapped two malingering neuropsychiatric patients in Sicily a sentiment shared by Marshall and Eisenhower though they favored a tamer style Yet psychiatric rejections evacuations and discharges mounted While psychiatrist Roy Grinker and a few others treated soldiers close to the front in Tunisia in early 1943 this was the exception But as demand for manpower soared and psychiatrists finally went to the field and saw that combat itself not predisposition precipitated breakdown leading military psychiatrists switched their emphasis from screening to prevention and treatment But this switch was too little too late and slowed by a year long series of Inspector General investigations even while numbers of psychiatric casualties soared Ironically despite and even partly because of psychiatrists wartime performance plus the emotional toll of war postwar America soon witnessed a dramatic growth in numbers popularity and influence of the profession culminating in the National Mental Health Act 1946 But veterans with PTSD not recognized until 1980 were largely neglected

Ecological Responses at Mount St. Helens: Revisited 35 years after the 1980 Eruption Charles M. Crisafulli, Virginia H. Dale, 2018-01-30 This book builds on existing work exploring succession disturbance ecology and the interface between geophysical and biological systems in the aftermath of the 1980 eruptions of Mount St Helens The eruption was dramatic both in the spatial extent of impacts and the range of volcanic disturbance types and intensities Complex geophysical forces created unparalleled opportunities to study initial ecological responses and long term succession processes that occur in response to a major contemporary eruption across a great diversity of ecosystems lowland to alpine forests meadows lakes streams and rivers These factors make Mount St Helens an extremely rich environment for learning about the ecology of

volcanic areas and more generally about ecosystem response to major disturbance of many types including land management. Lessons about ecological recovery at Mount St Helens are shaping thought about succession, disturbance ecology, ecosystem management, and landscape ecology. In the first five years after the eruption, several syntheses documented the numerous intensive studies of ecological recovery. The 2005 volume *Ecological Responses to the 1980 Eruption of Mount St Helens* (Springer Publishing) was the first ecological synthesis since 1987 of the scores of ecological studies underway in the area. More than half of the world's published studies on plant and animal responses to volcanic eruptions have taken place at Mount St Helens. The 25-year synthesis, which generally included investigations i.e. data from 1980-2000, made it possible to more thoroughly analyze initial stages of ecological responses and to test the validity of early interpretations and the duration of early phenomena. And 35 years after the eruption, it is time for many of the scientists working in the first three-decade post-eruption period to pass the science baton to the next generation of scientists to work at Mount St Helens, and a synthesis at this time of transfer of responsibility to a younger cohort of scientists will be an enormous asset to the continuation of work at the volcano.
