Medicine and Society, New Perspectives in Continental Philosophy Darian Meacham,2015-05-22 This volume addresses some of the most prominent questions in contemporary bioethics and philosophy of medicine liberal eugenics enhancement the normal and the pathological the classification of mental illness the relation between genetics disease and the political sphere the experience of illness and disability and the sense of the subject of bioethical inquiry itself All of these issues are addressed from a continental perspective drawing on a rich tradition of inquiry into these questions in the fields of phenomenology philosophical hermeneutics French epistemology critical theory and post structuralism At the same time the contributions engage with the Anglo American debate resulting in a fruitful and constructive conversation that not only shows the depth and breadth of continental perspectives in bioethics and medicine but also opens new avenues of discussion and exploration For decades European philosophers have offered important insights into the relation between the practices of medicine the concept of illness and society more broadly understood These interventions have generally striven to be both historically nuanced and accessible to non experts From Georges Canguilhem s seminal *The Normal and the Pathological*

Michel Foucault's lectures on madness, sexuality and biopolitics; Hans Jonas's deeply thoughtful essays on the right to life, extension and ethics in a technological age; Hans Georg Gadamer's lectures on *The Enigma of Health*; and more recently Jürgen Habermas's carefully nuanced interventions on the question of liberal eugenics, these thinkers have sought to engage the wider public as much as their fellow philosophers on questions of paramount importance to current bioethical and social political debate. The essays contained here continue this tradition of engagement and accessibility. In the best practices of European philosophy, the contributions in this volume aim to engage with and stimulate a broad spectrum of readers, not just experts. In doing so, the volume offers a showcase of the richness and rigor of continental perspectives on medicine and society.

Child Development Laura Berk, 2015-05-20 Child Development Literature for Science and Mathematics
DIANE Publishing Company, 1998. Representing the perspectives of educators in both the science and mathematics communities, this publication is intended to serve as a resource for teachers of students in kindergarten through grade 12 in choosing science and mathematics related literature for their schools and classrooms. It contains over 1,000 annotated entries on the physical sciences, earth sciences, life sciences, and mathematics. Formatted for easy use, each entry provides information on the author, publisher, and publication date; type of literature; subject emphasis; suggested grade span; and illustrations.

The Art of Teaching Science Jack Hassard, 2005. This is a core teaching textbook designed for the professional development of middle and high school science teachers. Differing from other texts in its constructivist approach to learning and teaching, it provides meaningful learning experiences and connections with the most recent research and understanding of science teaching. Each chapter is organized into two sections: the first focuses on the content of the major theme of the chapter, while the second consists of a newspaper-like feature called *The Science Teaching Gazette*, containing a variety of strategies for extending the learning process. Packed with learning tools, hands-on inquiry activities, case studies, think pieces, and interviews with teachers around the world, this is a remarkably comprehensive textbook designed to prepare a new cadre of science teachers.
